COLLET KNOBS

Function, styling, handling and simplicity of assembly were the designers' main criteria in the development of the Selco range of collet knobs. The various accessories (caps, pointers, figure dials and nut covers) push-fit into the basic knob to give added versatility. Caps are available in over 20 different colors.

MATERIALS

All knobs, caps, pointers and nut covers are made from Nylon and have a matte finish. The transparent figure dials are made from polycarbonate and the colored dials are of Nylon.

Collets, sleeves and nuts, installed into the knobs during manufacture, are of brass. They will accommodate a wide range of shaft lengths and bush lengths. All molded parts are stable in the temperature range −20°C to +70°C.

TURNING TORQUE

Aavid is prepared to apply any thermal management discipline to meet your design requirements. No one else has our depth of experience. We regularly provide innovative, cost-effective solutions to complex thermal management problems. Our extensive thermal and mechanical CAD capabilities are available to help satisfy your specific needs. Ask our product engineers for application support.

Hundreds of standard heat sinks for PCBs

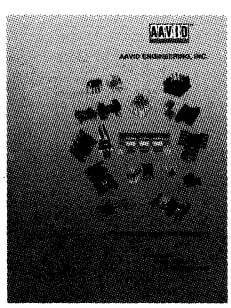
- For TO-3, TO-8, TO-18, TO-66, TO-92, TO-126, TO-127, TO-202, TO-218, TO-220, TO-247, TO-251 devices, etc.
- For pin grid array (PGA) packages: Intel 80486, Motorola 68040, etc.
- For leadless chip carrier sockets.
- For DIPs (plastic and ceramic), SIPs, and multiwatts.

Labor Saving Options

- **Spring clips** for mounting plastic power devices to heat sinks without bolts.
- **Interface pads,** grease free.
- **Tabs and standoffs.** Hot tin solder dipped for mounting heat sinks to PCBs.

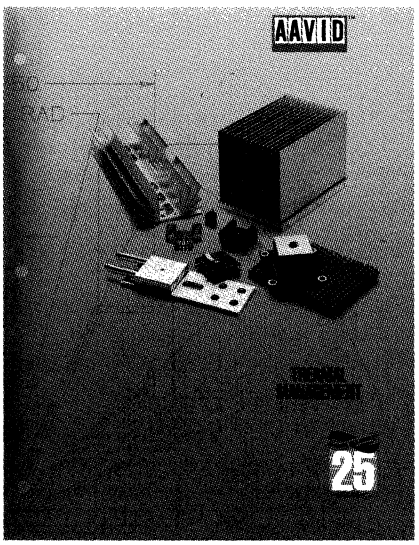
Accessories

Capacitor clamps, wave-solderable sockets, insulators and washers, thermally-conductive adhesives and compounds, including silicone-free thermal compounds.



BOARD-LEVEL SELECTOR GUIDE

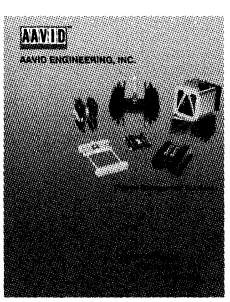
Covers board-level heat sinks and other cooling devices. Focuses on quick attachment products that are designed to reduce assembly costs.



112-PAGE FULL LINE CATALOG

Over 2500 standard extrusion profiles

Aavid offers the most complete selection of extruded heat sinks in the world. Some of the most unusual and complex extruded heat sinks are available. They are designed to cool all kinds of semiconductors—from power transistors to high-current SCRs, rectifiers, solid state relays and power modules.



HIGH-POWER FABRICATED EXTRUSIONS

Covers standard fabricated extrusions for cooling power semiconductors. Standard and customized extrusions for all medium- and high-power devices.

AAVID™

AAVID ENGINEERING, INC.

Standard fabricated extrusions

Many standard fabricated extrusions are available for cooling press packs (hockey pucks), stud-mount devices, power modules, DC-DC converters, TO-3s and other high-power JEDEC packages.

Forced convection coolers

Optimum thermal performance and low air flow resistance. Maximum heat transfer per ounce at minimum cost.

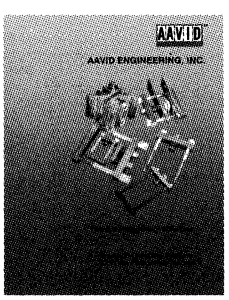
High power cooling products

- **Bonded-fin** heat sinks. 2-4 times more cooling per unit volume, lighter weight, and more design flexibility than extrusions.
- **Folded-fin** heat sinks. Lightest weight product for heavy-duty cooling.
- **Epoxy isolation** systems. Isolated heat spreaders and multi-piece isolation assemblies. High thermal conductivity.
- **Liquid-cooled** cold plates and bus bars. 10-30 times more cooling than air.
- **Clamps** for press pack semiconductors.
- **Heat pipe** assemblies.

Total manufacturing, fabricating, bonding, finishing

Aavid's capabilities go far beyond the usual stamping, extruding, casting and machining technologies, such as:

- Metallurgical, adhesive and mechanical bonding.
- Surface coating of all kinds.
- EDM machining, lapping, vibratory tumbling.
- Dozens of secondary operations.



CLAMPS FOR PRESS PACKS

Covers precision clamping systems for press pack semiconductors. Compressive force ratings up to 10,000 pounds; for semiconductors up to 4.72" diameter.

Our fans are becoming more intelligent. Our super smart fans can provide air volume proportional to equipment temperature thus minimizing noise and equipment temperature rise. Where fan operation is critical—sensor fans are available which provide an audio and/or visual signal should malfunction occur.

AMCOBILITY

Hotter Ideas For Keeping It Cool.

Amco has the broadest experience in building electronic system enclosures. And we've got the most in-depth experience in cooling devices. Depending on the exact need we can provide impeller blowers, centrifugal blowers, and tube axial fans with a full line of accessories.

The last word in electronics cooling: Amco's new motorized impeller.

Gives you air flow up to 540 SCFM, but costs less than a comparable-capacity centrifugal blower. Plus it's longer lasting, quieter, more compact, operates over a range of -30C to +70C, can be mounted in virtually any plane. And it's exquisitely reliable, because it's designed and built with Amcobility!

Another hot idea:

Instead of buying enclosures and cabinetry separately, why not order Amco enclosures with cooling systems already in place? Check our ads under Cabinets, Enclosures and Racks in this directory.

ICMASD...IC Alternate Source Directory

The all new 1991 version of the world famous Alternate Source Directory is now available in floppy disk form for your IBM XT & AT and 100% compatible personal computer with hard drive.

The **1991 ICMASD** contains the more than 180,000 listings that appear in the Alternate Source Directory Section contained in Volume Two of the printed version of the 1991 IC Master ...plus additional discontinued parts. The database includes complete vendor addresses and phone numbers.

You can personalize the **ICMASD** for your application. The program allows you to add comments, up to 20 digits long, to each listing. These comments can be part numbers, prices, or any information specific to your needs. You may also add, delete and/or discontinue devices!

For greater flexibility the base number search feature enables you to access parts by base number, i.e., the device number stripped of prefixes and suffixes. You don't need to know the manufactures codes to call up any of the alternates to these devices.

The **1991 ICMASD** is fast, convenient and very user friendly!

Complete program documentation is included. When ordering, be sure to specify if you want the **1991 ICMASD** on three, double-sided, double-density disks OR on one high-density disk.

For immediate delivery you can order the **1991 ICMASD** at $179.50* simply by charging your Visa or MasterCard credit card. To place your order or for more information, call or write:

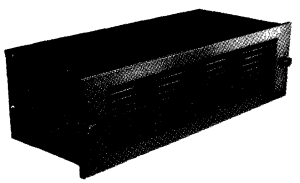
TORIN ENGINEERED BLOWERS

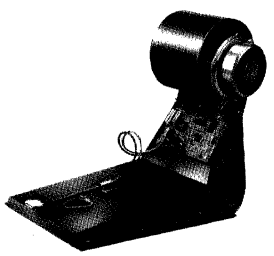
HAWKER SIDDELEY
FASCO
MOTORS AND BLOWERS

Packaged (Cabinet) Blowers— 125 to 540 CFM



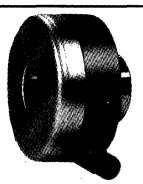
TORIN Packaged Blowers are used in clean environments for equipment that can operate at temperatures above ambient and against moderate static pressures. Each combines a quality blower in a cabinet, with a filter and grille. All units are engineered for top performance and built for reliability. All applicable components are UL/CSA Recognized.

Electronically-Controlled Brushless DC Blowers



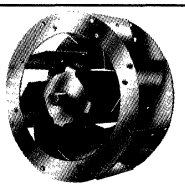
Brushless DC (BLDC) motors offer several benefits over AC or brush-type DC motors. They combine the maintenance-free advantage of AC units with the variable speed capability of conventional DC motors. They also produce less electrical "noise" to potentially interfere with sensitive electronic devices.
When combined with a thermistor-regulated, variable-speed motor control, a BLDC-driven blower produces variable air delivery to match the cooling requirements of the application.

Multi-Stage Blowers— 14 to 280 CFM



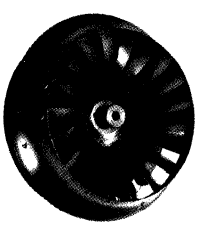
TORIN offers a one, two or three stage line of blowers for applications demanding low noise, high pressure and minimum space utilization. Two types are available: a full symmetrical (5.76" diameter); and the scroll discharge (15.62" and 15.75") configuration.

Backward-Inclined Motorized Impellers—190 to 750 CFM



TORIN Backward-Inclined Motorized Impellers are designed to operate without a conventional blower housing. The units are easily mounted and are more efficient and quieter than standard fans and blowers used in the same type of application.

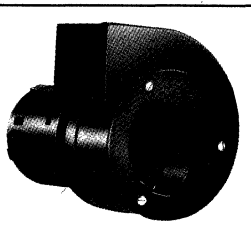
Mixed-Flow Blower Wheels— 540 to 1750 CFM



TORIN Mixed-Flow Blower Wheels are best suited to applications where pressures are too high for axial fans, and too low for conventional centrifugal blowers. These wheels are normally installed in a housing, but can also perform well without a housing.

Standard construction for 9" and 10" diameter wheels is zinc-clad steel and for the 12⅝" diameter wheels aluminum is used. The wheels are built to close tolerances and statically balanced for smooth operation.

High-Performance Centrifugal— 30 to 665 CFM



FASCO "Swirlwind" blowers offer the designer high pressure in a compact package. Utilizing patented design technology, these blowers produce up to four times (20-inches of water) the sealed static pressure of similar sized conventional blowers. Enhanced pressure characteristics are present across the entire range of operation. "Swirlwind" blowers are ideal for applications having significant restrictions to air flow.

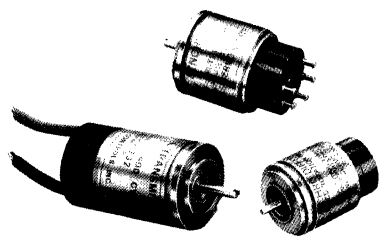
Brushless Resolvers & Synchros

Brushless resolvers are available in a wide variety of electrical and mechanical configurations for all standard synchro applications. The brushless design uses rotary transformers to eliminate the wiping contact normally employed to couple signals to synchro rotors.

Harowe Synchros can function as control and torque transmitters and receivers, control transformers, differentials, induction potentiometers and resolvers. Limited rotation types use hairspring conductors to couple signals to rotors and are capable of 330° rotation with stops.



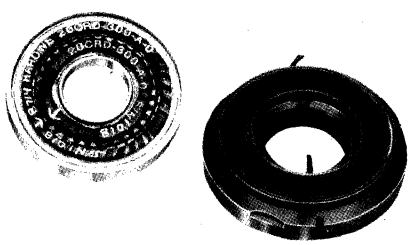
Pancake Synchros & Resolvers

Pancake synchros and resolvers are typically mounted on the gimbals of gyros or stable-platforms. They are furnished as a matched set, consisting of a rotor and stator to be mounted in a customer's equipment.

These components have larger diameter and short length compared to other Servo components.

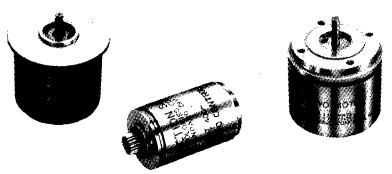
The pancake design allows for greater diversity of mounting configurations and electrical parameters.

Mounting requirements are special for each customer's design. This catalog depicts components representing Harowe's capability which is not restricted to the sizes and types listed.



AC Motors

AC Servo Motors are available in a wide variety of torque and speed ratings plus mechanical options and braked, viscous-damped and high acceleration types at 60 and 400 Hz.



Brushless DC Motors

Harowe brushless motors feature high performance magnetics, combined with a variety of winding configurations and mechanical designs to provide customers with a wide selection of performance characteristics. Flexibility of our brushless motor designs enables us to easily respond to the changing and more demanding needs of our customers.

Harowe brushless motors are ideal for use in computers, robotics, machine tools, military and aerospace and many other applications where long life, quiet operation, low inertia and high speeds are required.

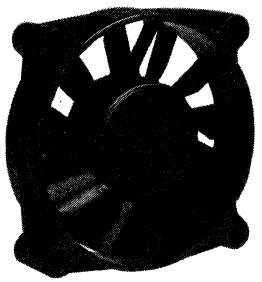
AUTO-COOL Series

Introducing...the fan with a brain.



THERMISTOR BUILT INTO FAN

FANS SHOWN ARE EXAMPLE ONLY. ALL SIZES LISTED BELOW ARE AVAILABLE.

INTERFAN'S AUTO-COOL SERIES

With a thermally sensitive solid-state semiconducting device for a brain, this fan actually thinks for itself. The brain (thermistor) reads temperature and controls the cooling output of the fan by creating variance in the speed of the fan impeller rotation *automatically.*

In a typical application: During periods of non-use, the internal temperature tends to drop; the reverse is true when the workstation is in full operation. With automatic speed control, AUTO-COOL, the fan will change speed in direct proportion with the temperature requirements; it works hard when it's hot...and slows down when it's cooler, for lower power consumption and minimum noise, *all automatically!*

The sensor, and electronic circuitry built into the fan, constantly detects internal temperature and makes adjustments in fan speed as even minor changes in temperature are noted.

THERMOELECTRIC COOLERS

WHAT IS A THERMOELECTRIC COOLER?

Thermoelectric coolers (TECs) are solid-state, vibration-free, noise-free heat pumps. They are modular devices and are simple to install and operate. Since they consist primarily of thermoelectric material sandwiched between ceramic plates with no moving parts, they are inherently reliable.

A single-stage thermoelectric cooler is composed of a matrix of thermoelectric couples, connected electrically in series and thermally in parallel. The thermoelectric couple consists of a p- and n-type semiconductor material.

A TEC can be fabricated with as few as one couple to as many as several hundred couples sandwiched between two ceramic plates. These plates form the top and base of the cooler and provide structural integrity as well as electrical insulation from, and thermal conduction to, the heat sink and the device being cooled.

HOW IT WORKS

Regulating the direction and amount of current—with the use of a feedback loop and temperature controller—allows TECs to cool, heat, or stabilize temperature. Reversing the direction of the current reverses the direction of heat pumping. The figure opposite illustrates the operation of a thermoelectric couple in the cooling mode.

TYPICAL APPLICATIONS

Thermoelectric coolers are ideally suited to a wide variety of applications due to their small size, wide operating temperature range, low power requirements, and high reliability. Applications can be found in military, aerospace, and commercial products, laboratory and scientific equipment, medical instruments, and test equipment.

Electro-optic cooling applications include stabilizing the temperature of solid-state lasers, and cooling infrared detectors and charge coupled devices (CCDs).

Volume cooling includes small volumes of air or liquid, and cold plates.

Miscellaneous Electronic Components such as high speed integrated circuits, parametric amplifiers, avalanche photo diodes, and vidicon tubes can be spot cooled using thermoelectric coolers.

HOW TO SPECIFY THERMOELECTRIC COOLERS

The standard TECs on the previous page are a representative sample of our product line and are grouped according to the number of stages indicated by the first digit following the "MI." They are listed in increasing order according to heat pumping capacity (Qmax); the net heat load to completely suppress ΔT at the maximum applied power (Imax @ Vmax). For example, the MI3026T is a three-stage TEC which produces 109°C ΔT in a vacuum at I.3 amps @ 3.4 volts. It will take .62 watts to completely suppress that ΔT to zero. This suppression is linear, so that 10% of Qmax (0.072 watts) applied to the cold plate would suppress ΔT 10%, thereby producing 98.1°C ΔT for that heat load condition. Because of the non-linear behavior of TECs and the number of variables involved in analyzing them, they can be designed and modeled more accurately by our experienced engineers using Marlow Industries' proprietary computer software.

For selection of TECs with more than two stages, or if more precision is required, please consult one of our applications engineers.

ORDERING TECs

After you have chosen the TEC which meets your performance requirements, you will need to specify the complete model number. This consists of the base model number followed by the type of metallization (which varies depending on method of installation) and type of ceramic (following model number in table at left).

—01 = both sides are metallized • AC = aluminum oxide ceramics
—02 = hot side only is metallized • BC = beryllium oxide ceramics
—03 = no metallization • AB = combination of AB & BC

For example, an MI1021T with both sides metallized is specified as MI1021T-01AC followed by any of these special options:

- Pretinning w/96°C or 117°C solder on metallized ceramic surface(s).
- Thermistor mounted on edge of cold-side ceramic. (Calibration available.)
- Lapped to ±.001 inch (.025 mm) cf a nominal height. (Available on some TECs. All DuraTEC's may be lapped to ±0.001".
- Elevated temperature burn-in. (Standard on some TECs, available on others.
- DuraTEC™ greater than 0.75" x 0.75" are available in —03 only.

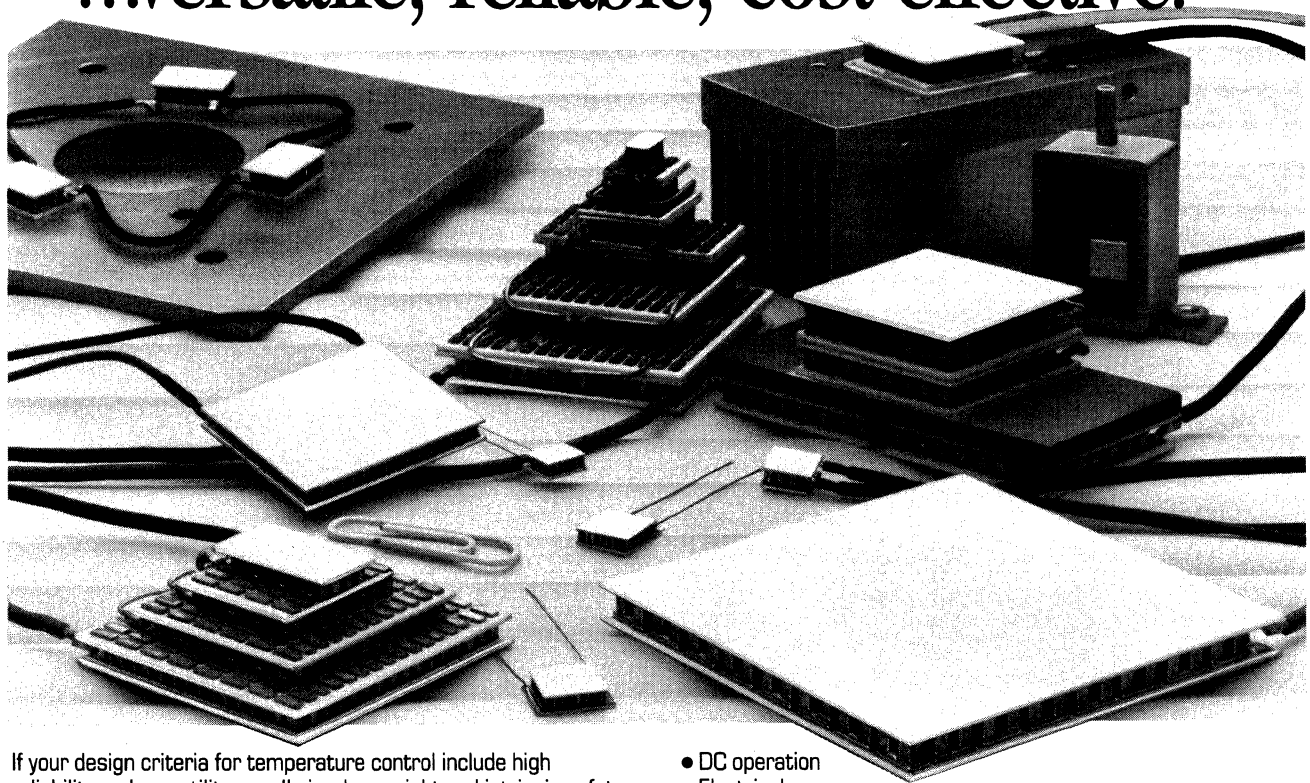
Thermoelectric Cooling from MELCOR ...versatile, reliable, cost-effective.



If your design criteria for temperature control include high reliability and versatility, small size, low weight and intrinsic safety, you owe it to yourself to investigate Frigichip™—the miniaturized heat pump from MELCOR.

Frigichips are solid state, thermoelectric heat pumps that utilize the Peltier effect to perform the same cooling functions as freon-based compression or absorption refrigerators...but in miniature!! Use them for space cooling of cabinet enclosures, cooling of special shapes, plates, castings or spot cooling of small individual devices. Use for precise temperature control by cycling from cooling to heating.

Broad Spectrum of Applications

MELCOR Frigichips have been proven for three decades in a wide range of thermal management applications, including:

- Fiber optic & other electro-optic cooling applications
- Food service refrigeration & other commercial/institutional applications
- Appliances: portable 12 volt refrigerators, water & beverage coolers, etc.
- Instruments for physical, chemical, optical & electronic analysis
- Laboratory & scientific instruments, computers, cameras
- Medical & pharmaceutical equipment
- Military/aerospace applications
- And countless others

Only Frigichip Combines All These Benefits

- Quick cooling to below ambient—economically
- Reduced space/size/weight
- Reliable solid state operation—no sound or vibration (lifetimes of > 200,000 hours!)
- Precision temperature control capability
- Minimum, if any, electrical noise
- DC operation
- Electrical power generation from waste heat
- More than 100 standard single stage types available, from sub-miniature, low capacity to compact, high-capacity
- Multi-stage cascades to −95°C, designed to specifications

Wide Choice of Standard and Custom Modules

MELCOR offers you more than 100 standard Frigichip modules ranging in size from 2 x 3 mm to 62 x 62 mm and cooling capacities from 0.2 to 125 watts. The tables and graphs on the following three pages provide module specifications and a method for choosing the module that's ideal for your application. In addition, MELCOR can provide custom asemblies and multi-stage cascades, with or without heat exchangers.

From the World Leader in Thermoelectrics

More than 30 years ago, MELCOR was the first to provide industry with practical thermoelectric devices. Today, we continue to advance this remarkable technology...and provide most of the world's thermoelectric modules! For more details or immediate assistance, just call our applications group.

SOLID STATE COOLING WITH THERMOELECTRICS

How To Use Universal Performance Graphs:

APPROACH #1: Convert universal scale values to those of specific module selected:

1. Convert Q_c/GxN (scale values) to Q_c (watts heat pumped): Multiply Q_c/GxN values by module GxN (from table in module specifications chart).
2. Convert V/N values to V (volts input): Multiply V/N values by module N from table.
3. Convert 50 G, 40 G, etc. to I (amps input) values: Multiply 50 by module G, etc.

APPROACH #2: From application, knowing required Q_c, T_c and T_h, select appropriate module:

1. Calculate $\triangle T = T_h - T_c$; select operating current I (I max = 50 G).
2. From universals, obtain Q_c/GxN. Calculate GxN.
3. Select appropriate module from GxN table in module specifications chart.

EXAMPLE: Required Q_c = 31 Watts, T_c = +5°C, T_h = +35°C
1. $\triangle T$ = 35° − 5° = 30°C. Choose operating current (typically from 30 G to 40 G) at 35 G (equals 35/50 = 70% of I max.)
2. From T_h = 35°C graph ($\triangle T$ = 30°, I = 35 G), obtain Q_c/GxN = 1.65; Then GxN = $Q_c/1.65$ = 31/1.65 = 18.8.
3. Choose module with GxN ≥ 18.8; choose CP1.4-127-045 (GxN = 21.6) or CP2-71-06 (GxN = 19.9).

If desired, approach #1 may now be followed for module selected.

ICMASD...IC Alternate Source Directory

The all new 1991 version of the world famous Alternate Source Directory is now available in floppy disk form for your IBM XT & AT and 100% compatible personal computer with hard drive.

The **1991 ICMASD** contains the more than 180,000 listings that appear in the Alternate Source Directory Section contained in Volume Two of the printed version of the 1991 IC Master ...plus additional discontinued parts. The database includes complete vendor addresses and phone numbers.

You can personalize the **ICMASD** for your application. The program allows you to add comments, up to 20 digits long, to each listing. These comments can be part numbers, prices, or any information specific to your needs. You may also add, delete and/or discontinue devices!

For greater flexibility the base number search feature enables you to access parts by base number, i.e., the device number stripped of prefixes and suffixes. You don't need to know the manufactures codes to call up any of the alternates to these devices.

The **1991 ICMASD** is fast, convenient and very user friendly!

Complete program documentation is included. When ordering, be sure to specify if you want the **1991 ICMASD** on three, double-sided, double-density disks OR on one high-density disk.

For immediate delivery you can order the **1991 ICMASD** at $179.50* simply by charging your Visa or MasterCard credit card. To place your order or for more information, call or write:

NOW YOU CAN SPECIFY AN INCH WITHOUT GIVING AN INCH

You can now specify a PAPST MULTIFAN with an installation depth of just one inch.

Now you can specify the world's best quality fan even in your tightest design. Because PAPST's high-performance brushless DC MULTIFAN now comes with an installation depth as narrow as one inch.

It's thinner. It's quieter. It uses less power.

This narrowest-of-all MULTIFAN positively coasts through the toughest noise test with whisper-quiet ease. It needs very little power, operating on a super-efficient DC brushless motor that provides exceptionally soft commutation.

And like all PAPST MULTIFANS, it lets you customize your application: you'll be able to control speed by varying voltage to get the absolute optimum airflow with minimum noise.

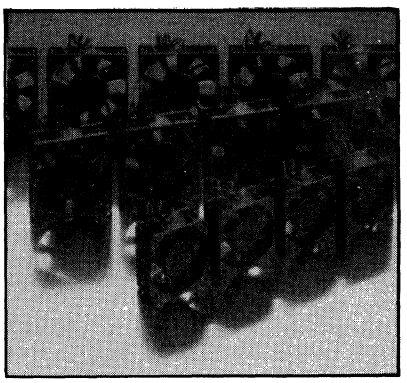
It will even cause Purchasing to smile!

Despite its high engineering quality, you'll find this fan fits your budget.

So specifying it means you win two ways. You'll keep component costs down. And at the same time, you won't compromise on your design's engineering integrity. Not even an inch.

PAPST's new DC VARIOFAN never makes more noise than necessary to maintain your specified cooling requirements. It succeeds where other fans fail by using a proprietary ASIC technology to vary its speed with changes in temperature.

The trouble with most fans is that they operate constantly at full speed to compensate for the "Worst Case Condition." But such conditions often occur only 5% of the time or less. This means excess power (read: *noise*) occurs 95% of the time!



With PAPST's new DC VARIOFAN, you only use the exact power/speed needed to achieve your specified cooling conditions. Less power/speed means you use less energy. Less power/speed means less noise. Less power/speed means less wear and tear and longer life performance.

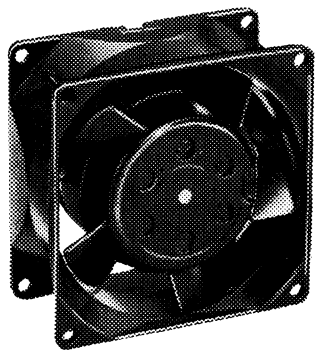
PAPST SOLID STATE BRUSHLESS DC FANS

THE ONLY COMPANY OFFERING YOU A FULL FAMILY OF SOLID STATE, BRUSHLESS DC FANS IN POPULAR FRAME SIZES & VOLTAGES, & AT POPULAR PRICES.



PAPST has a full line of self-contained, solid state, brushless DC fans for you to choose from. Through their design, these fans have been engineered to tackle those specialized applications which require highly reliable DC performance. Common uses include mobile radio equipment, medical electronics, shipboard computers, airborne applications, communications systems, automotive applications, marine use and telecommunications; wherever DC voltage is normally available. They are also finding wide acceptance for use in power stand-by modes to prevent memory loss in the event of AC power failure.

These fans are especially efficient and will outperform similar sized fans at normal operating back pressure. Typically, they offer greater air volume (cfm), reduced noise levels and reduced power drain. For example, the power drain at maximum back pressure is approximately 25% of that required in conventional AC units. These fans also achieve a new low in magnetic radiation and RF noise, thereby assuring the pure signals necessary for cirtical airborne or shipboard use.

These fans work well at all rated voltages, and are extremely quiet. They can be adjusted for performance and noise level by altering the voltage within the voltage range for your particular application. They feature a brushless motor with all electronics mounted on a PC card within the motor frame. Drive amplifiers for the motor are controlled by a patented Hall-effect generator circuit which is coupled by small pole pieces to the motor's field magnet (Patent No. 3-873-897). Available voltages include 5 VDC nominal, 12 VDC nominal, 24 VDC nominal and 48 VDC nominal.

The brushless DC motor is polarity protected* to avoid accidental damage and costly down time. If the input polarity is accidentally reversed, integral diodes block all circuits and the motor simply stops. Even in a locked rotor condition,* the motor goes into a neutral state to avoid damage. Precision bearings and lubricants help to achieve a life expectancy of 35,000 hours (sleeve bearing) and 60,000 hours (ball bearing) at maximum permissible ambient temperature. Note: If the ambient temperature in which the fan operates is at 20°C below the above levels the life expectancy increases by 10,000 hours.

These fans do not require an external voltage inverter. This means that you save valuable mounting space and weight because the only consideration in mounting is the fan itself. This new concept has eliminated many of the inherent reliability and RF noise problems generally associated with using AC motors in a DC environment.

*Except for 5 Volt models.

PAPST AC FANS

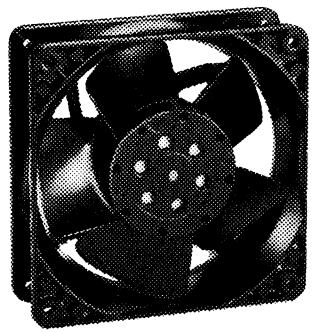
Field proven, quality products you can rely upon for all of your cooling requirements.

PAPST offers a wide variety of fans for your selection. Each model combines the features of extended life with high airflow delivery at low noise levels.

Lightweight all-metal construction is typical of PAPST AC fans. This all-metal construction eliminates breakage and warping often found in conventional plastic fans. This all-metal feature also permits the entire fan to function as a natural heat sink, assuring cooler operation by effectively transferring heat from the rotor into the air stream via the impeller blades. Potential injurious heat is also transferred from the stator to the die-cast venturi by way of the metal struts. Life expectancy: (1) AC fans with sleeve bearings—20,000 hours at maximum permissible ambient temperatures. (2) AC fans with ball bearings—20,000 hours at 72° C or at the maximum permissible temperature if this is less than 72° C. Note: If the ambient temperature in which the fan operates is at 20° C below the above levels the life expectancy increases by 10,000 hours.

The PAPST exclusive bearing lubrication system incorporates hand-fitted broached sintered iron sleeve bearings on most fans, with precision high-temperature ball bearing versions also available. The dual sleeve bearings are separated by a large oil felt reservoir, which provides continuous fault free circulation of a special lubricant to the shaft and bearing surface.

An efficient, powerful inside-out motor, housed entirely within the impeller hub to conserve axial depth, has higher torque capabilities and a lower internal heat rise than the contemporary fixed shaft designs.



The impeller blades are computer designed and impulse welded to the precision hub and dynamically balanced to within .0001 inches in each end plane to minimize acoustical and mechanical vibrations.

PAPST also offers a super premium grade fan; (5 year warranty).

Perhaps the two most important fields of application for premium grade fans are: (1) in limited-production deluxe equipment, in professional-grade instrumentation, in few-of-a-kind, custom-designed and permanently-installed systems requiring optimum performance and absolute dependability for many years; and (2) as field replacements for retrofit units for original-equipment fans that have proven to be unreliable, are too noisy, or do not produce sufficient cooling airflow.

PAPST fans are Underwriters' Laboratories, Inc. recognized and have their Yellow Card Component Recognition Number E41168. Most are CSA certified and VDE approved.

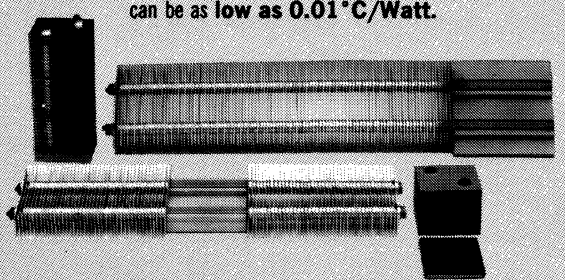
Efficient Cooling for Electronic Components

Thermacore has been developing and manufacturing heat transfer equipment since 1970. Their engineering of heat pipes and heat transfer devices is recognized worldwide as representing the leading technology.

HEAT PIPE HEAT SINKS

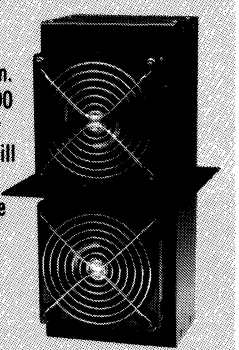
Highly efficient cooling is provided to semiconductors, circuit boards and electronic components with Thermacore's Heat Pipe Heat Sinks. By using heat pipes for heat transfer, the thermal resistance of these devices can be as **low as 0.01°C/Watt.**



Thermacore's technical engineering capabilities and specialized manufacturing equipment permit the custom design and production of Heat Pipe Heat Sinks for any specific requirements. Heat Pipes in a wide range of lengths, diameters, configurations and thermal transfer capacities can also be ordered from Thermacore.

AIR to AIR SEALED ENCLOSURE COOLER

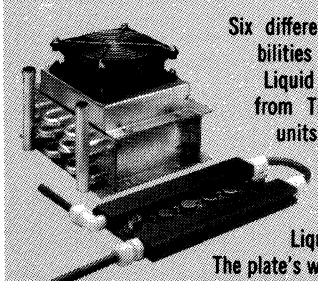
Using a heat pipe core for heat transfer, Thermacore's Air to Air Exchangers provide effective cooling with low power consumption. In a 24" × 30" × 10" enclosure, the HX-400 requires only 30 watts of power to transfer 400 watts at 20°C rise, while the HX-800 will transfer 800 watts at 20°C rise using only 64 watts of power. Both models maintain the integrity of NEMA 4 and 12 enclosures and can be top, side, back or door mounted.



SEALED ENCLOSURE AIR CONDITIONERS

Air Conditioners with BTU/hr of 1500, 3000, 6000 or 7500 are available from Thermacore. Each unit cools and recirculates the enclosure's clean interior air while maintaining the integrity of NEMA 12 enclosures. They are thermostatically controlled and are U.L. Listed. Easily installed by your company's maintenance department, the units are suited for use with both new or existing enclosures.

LIQUID to AIR HEAT EXCHANGERS



Six different sizes, with heat rejection capabilities from 1.5 kilowatt to 15 kilowatts, of Liquid to Air Heat Exchangers are available from Thermacore. Three are single fan units and three have double fans. Where high power dissipation levels preclude the use of natural or forced air cooling, Thermacore's Liquid Cooled Plate is recommended. The plate's water passage is an integral part of the extrusion thereby eliminating one interface.

DEVELOPMENT & MANUFACTURING for GOVERNMENT and INDUSTRY

The expertise of Thermacore's multi-disciplined engineering staff allows Governments and Industry to present Thermacore with either a thermal problem to solve or a set of performance specifications for a new heat transfer device. Thermacore solves the problem, verifies the design with operating prototypes and then produces the final product. They offer just-in-time delivery and routinely operate under MIL-1-45208A and comparable quality disciplines.

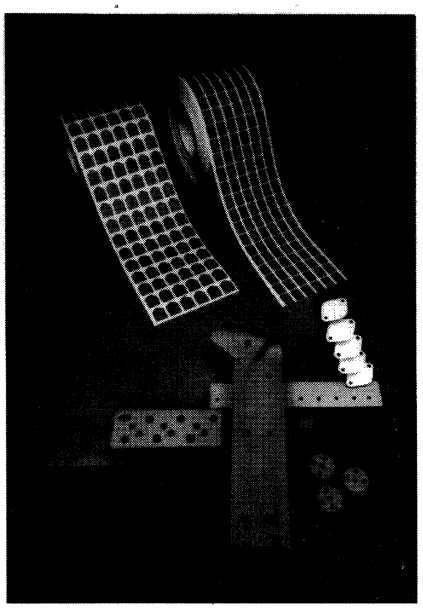
SIL-PAD THERMALLY CONDUCTIVE INSULATORS



The Bergquist Company established the standard for elastomeric thermally conductive insulation materials with the development of Sil-Pads over 20 years ago. *Sil-Pads were developed as a clean grease-free alternative to mica and grease.* Now, a complete family of materials are available to meet the diverse and changing requirements of today's design engineer.

Sil-Pads replace a variety of materials used for thermally conductive insulation including mica insulators. Mica and grease have been in use for over 30 years and are still commonly used as insulators. Mica and grease have good thermal and electrical properties but mica is easily cracked or broken and grease is messy to work with and contaminates assemblies.

Sil-Pads also replace ceramic insulators in high performance applications. These ceramic wafers are expensive and crack easily. Polyimide films are also used as insulators and are usually combined with wax or grease to achieve a low thermal impedance.

CONSTRUCTION

Most Sil-Pad thermally conductive insulators are constructed with a silicone rubber binder and a woven fiberglass carrier or Kapton substrate. The fiberglass carrier provides reinforcement and contributes to dielectric strength. Silicone rubber has a low dielectric constant, high dielectric strength, good chemical resistance and high thermal stability.

THERMAL PROPERTIES

Discrete semiconductors under normal operating conditions, dissipate waste power which raises the junction temperature of the device. Unless sufficient heat is conducted out of the device, its electrical performance and parameters are changed. *A 10° C rise in junction temperature reduces the mean-time-to-failure of a device by a factor of two. Also, above 25° C, the semiconductors total power handling capability will be reduced by a derating factor inherent to the device.*

SIL-PAD 400®

Thermal Resistance .50 °C/watt
Breakdown Voltage, 5000 Volts min.

Sil-Pad 400 is the original Sil-Pad material. Sil-Pad 400 is a composite of silicone rubber and fiberglass. It is flame retardant and specially formulated for use as a thermally conductive insulator. Primary use is to electrically isolate power sources from heat sinks. Sil-Pad 400 is non-toxic and resists damage from cleaning agents.

Sil-Pad 400 has excellent mechanical and physical characteristics. Surfaces are pliable and allow complete surface contact with excellent heat dissipation. It will not chip or fracture under high compressive stress and actually improves its thermal resistance with age. The reinforcing fiberglass gives excellent cut-through resistance. It contains no organic materials and will not support fungus growth. Expect immediate delivery of all standard configurations.

SIL-PAD 1000®

Thermal Resistance, .3 °C/watt
Breakdown Voltage, 4500 Volts min.

Sil-Pad 1000 is a composite of silicone rubber and fiberglass. It is boron nitride filled and offers low thermal resistance. Sil-Pad 1000 is non-toxic and resists damage from cleaning agents. It is flame retardant and specially formulated for use as a thermally conductive insulator.

Sil-Pad 1000 has the same excellent mechanical and physical characteristics of our Sil-Pad 400 material while offering a 35% reduction in thermal resistance.

SIL-PAD 2000®

Thermal Resistance, 0.2 °C/watt
Breakdown Voltage, 4000 Volts min.

Sil-Pad 2000 is Bergquist's high performance, high reliability thermally conductive insulator. Sil-Pad 2000 is designed for demanding military/aerospace and commercial applications. In these applications Sil-Pad 2000 complies with military standards.

This boron nitride loaded silicone elastomer is formulated to maximize the thermal and dielectric performance of the filler/binder matrix. The result is a "grease-free", conformable material capable of meeting or exceeding the thermal and electrical requirements of high reliability electronic packaging applications.

BERGQUIST THERMAL MANAGEMENT PRODUCTS

Q-PAD II®

Thermal Resistance, 0.1 ° C/watt

Q-Pad II is a composite of .001" aluminum foil coated both sides with .0025" thermally/electrically conductive Sil-Pad rubber. It is designed for those applications where maximum heat transfer is needed and *electrical insulation is not required.* Q-Pad II eliminates problems associated with grease such as contamination of reflow solder or cleaning operations. Q-Pad II can be used prior to these operations whereas grease must be used after. Q-Pad II also eliminates dust collection which can cause possible surface shorting or heat build-up.

SIL-PAD K-4®

Thermal Resistance, .40 °C/watt
Breakdown Voltage, 5000 Volts min.

Bergquist's Sil-Pad K-4 is designed and developed in conjunction with DuPont. Sil-Pad K-4 combines the thermal transfer properties of well-known Sil-Pad rubber with high dielectric, physically tough DuPont Kapton MT® film. Kapton MT® is a specially developed film which has high thermal conductivity. The result is a durable insulator that withstands high voltages, requires no thermal grease to transfer heat, is available in customized shapes and sizes, and saves time and costs while increasing productivity.

SIL-PAD K-6®

Thermal Resistance, .3 °C/Watt
Breakdown Voltage, 5000 Volts min.

Sil-Pad® K-6 is a medium performance Kapton based thermally conductive insulator. Thermally conductive Kapton® MT film is coated with an aluminum oxide/boron nitride filled silicone elastomer to deliver " boron nitride" performance. Kapton film provides a continuous physically tough dielectric barrier against "cut through" and resultant assembly failures.

SIL-PAD K-10®

Thermal Resistance, 0.2 °C/watt
Breakdown Voltage, 5000 Volts min.

Bergquist Sil-Pad K-10 is the new high performance insulator developed in conjunction with DuPont. K-10 combines special Kapton® MT Polyimide film with boron nitride filled silicone rubber. The result is a product with good cut-through properties and excellent thermal performance.

K-10 is designed to replace ceramic insulators such as Beryllium Oxide, Boron Nitride and Alumina. These insulators are expensive and they break easily. K-10 eliminates breakage and costs much less than ceramics.

POLY-PAD.....FOR SILICONE SENSITIVE APPLICATIONS

Polyester based, thermally conductive insulators from Bergquist provide a complete family of materials for silicone-sensitive applications. Poly-Pads are ideally suited for applications requiring conformal coatings or applications where silicone outgassing is a concern (telecommunications and certain aerospace applications.) Poly-Pads are constructed with ceramic filled polyester resins coating either side of a fiberglass carrier or a Kapton® carrier. The Poly-Pad family offers a complete range of performance characteristics to match individual applications.

POLY-PAD 400®

Thermal resistance, 0.4 °C/Watt
Breakdown Voltage, 4500 Volts min.

Poly-Pad 400 is a fiberglass based insulator coated with an alumina-filled polyester resin. Poly-Pad 400 is economical and designed for most standard applications.

POLY-PAD 1000®

Thermal Resistance, 0.3 °C/Watt
Breakdown Voltage, 2500 Volts min.

Poly-Pad 1000 is also a fiberglass based insulator coated with a boron nitride-filled polyester resin. Poly-Pad 1000 offers superior thermal resistance for high performance applications.

POLY-PAD K4®

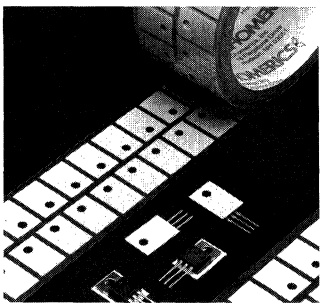
Chomerics CHO-THERM® Thermal Management Materials

Products for Every Need ☐ CHO-THERM® thermally conductive interface materials are designed to transfer heat from electronic components to heat sinks while providing electrical isolation at the interface sites. One-component CHO-THERM materials are based on silicone or urethane binders, and contain boron nitride, aluminum oxide or magnesium oxide thermally conductive fillers. Unlike mica, beryllium oxide, or other insulators, CHO-THERM does not require grease. This means there is no mica cracking, silicone migration or drying out. ☐



Fiberglass Reinforced Silicone Materials
This family of CHO-THERM products gives superior thermal and dielectric performance. Their silicone binder makes them effective in temperatures ranging from −60°C to 200°C. Glass cloth reinforcement makes them resistant to tear, cut through and punctures. ☐

Film Reinforced Urethane Materials
The urethane binder in this family of CHO-THERM materials allows conformal coating without dewetting problems. These products use boron nitride or magnesium oxide as their thermally conductive filler. Excellent dielectric strength and exceptional durability are provided by a polyimide or polyester layer. ☐

Film Reinforced Silicone Materials
The silicone binder in these materials makes them the right choice for applications where use temperatures reach the 150° to 200°C range. Fillers of boron nitride or magnesium oxide provide effective thermal conductivity. Superior dielectric strength and durability are obtained from polyimide film reinforcement. ☐

Special Performance Thermal Interface Materials

CHO-THERM 1680 ☐ CHO-THERM 1680 thermal interface elastomers are ideally suited for surface mount applications. They have high tack, pressure-sensitive adhesive on both sides to hold hybrid, ceramic, and flat packages in place, without the use of mechanical fasteners. Their boron nitride-filled silicone layer provides excellent thermal performance, and their polyimide film layer offers good cut-through resistance. ☐

CHO-THERM 1646 ☐ In applications where no dielectric properties are required, CHO-THERM 1646 material offers the best available thermal performance, without the use of grease. This material is a boron nitride-filled silicone coated on one side of 2 mil aluminum. The aluminum layer has acrylic pressure-sensitive adhesive on the other side. ☐

CHO-THERM T274 ☐ CHO-THERM T274 thermally conductive elastomer features high conformability and material thickness to fill air gaps up to 200 mils. Its aluminum oxide-filled silicone provides a thermal path 25 times more conductive than air. Its thin, high durometer fiberglass layer resists tear and facilitates handling. CHO-THERM T274 material has an extremely tacky surface and a Shore A durometer of less than 3. ☐

Thermally Conductive Silicone Compounds
CHO-THERM 1641 and 1642 are thermally conductive and electrically isolating RTV adhesive/sealant compounds. They cure in place without migration and offer a choice of temporary or permanent bonding. CHO-THERM 1641 is a one-component compound. CHO-THERM 1642 is a two-component material recommended for very thick applications and low humidity conditions. ☐

Availability
CHO-THERM materials are available in sheet form or die-cut. Most are available with optional pressure-sensitive adhesive on one or both sides. All may be used with degreasing solutions after wave soldering in preparation for conformal coatings. ☐

SARCON® THERMAL-CONDUCTIVE AND FLAME RETARDANT SILICONE RUBBER

SARCON® Products are Vital Electronic Components

A unique new product range developed on the basis of our proprietary technology—SARCON is a completely novel type of silicone rubber combining high thermal conductivity and superior flame-retardancy with the inherent properties of silicone rubber such as heat resistance and electrical insulating properties.

In recent years, the fast rate at which electronics and computer technology have spread through day-to-day life, has led to the need for more powerful semiconductor devices and more compact and lightweight products. Our Fujipoly silicone rubber, developed to meet these needs, has already earned itself a high reputation among many users, praising it as a revolutionary rubber-type electrical insulatant.

Its applications span a constantly growing range as thermal conductive insulators for semiconductor devices, compression jointing materials for thermistors and temperature sensors, and as a thermal conductive material for all types of heaters.

SARCON is the most outstanding product from our state-of-the-art production facilities, with micro-unit accuracy standards and a molding technology of the highest level that has taken us years to perfect. Apart from sheet, SARCON is also available in tape, tube and cap form and can be supplied with an adhesive. To let the user choose the best suited product for his purpose, application, and conditions, it comes in two grades with or without adhesive, and in four types: TR, HR, GTR, and GHR.

Tailor-Made for a Perfect Fit with Users' Needs

• General Type—SARCON TR
Press and extrusion molding permit the manufacture of any type of intricate shape, whether cap, sheet, tape, or tube-shaped, to precisely meet practical needs.

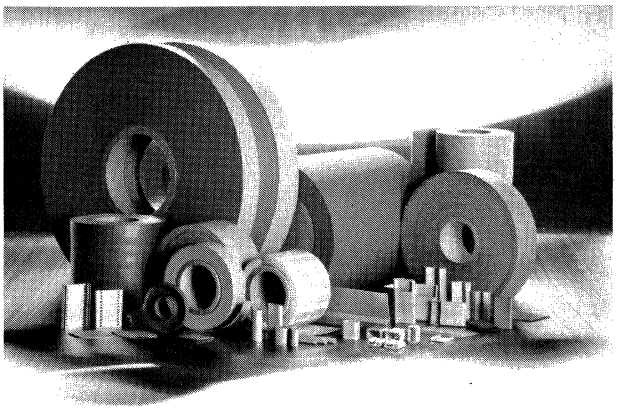
• High-Heat Conductive Type—SARCON HR
Thanks to the inclusion of a special fine ceramic ingredient, this high-grade type of SARCON offers remarkably improved thermal conductivity.

• Reinforced type—SARCON GTR • SARCON GHR
These particular reinforced grades have a 0.05mm thick glass cloth layer laminated onto TR and HR to provide a dramatic increase in physical strength characteristics such as tensile and tear strength.

For improved ease of handling, we also offer our SARCON AD series which corresponds to the SARCON GTR and GHR but with the application of an adhesive coating.

Wide Range of Applications

- Especially for use as electrically insulating heat-dissipating spacers in power transistors and semiconductors such as ICs and LSIs
- For use as electrically insulating heat-dissipating spacers in thermistors and posistors.
- Ideal for electronic jars, panel heaters, etc.
- For use as an electrical insulator in temperature fuses and temperature sensors, or as a high/low temperature heat transfer medium.
- Ideal for microwave ovens, panel heaters, ceramic heaters, etc.
- As a replacement for molded silicone-rubber parts in applications with a heat gradient. Ideal for insulating plates around microwave ovens and magnetrons, transformers, etc.
- Ideal for TV, video, stereo, Compact-Disc players, stabilized power supplies, computers, brushless motors, etc.

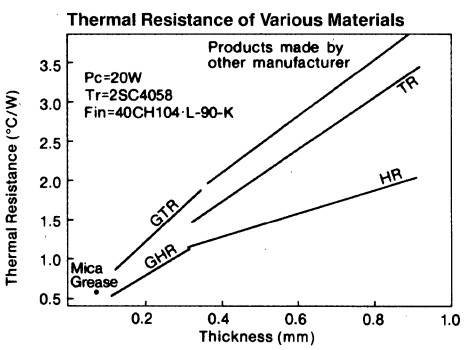


SARCON® Offers Superior Properties with a Host of User Benefits

• High Heat Conductivity
SARCON has a thermal conductivity eight times that of conventional silicone rubber, three times that of mica, and twelve times that of polyester.

Product Description	Thermal Conductivity ($\times 10^{-4}$ cal/cm•Sec•°C)
SARCON HR	41
SARCON TR	29
SARCON GHR	34
SARCON GTR	22
General silicone rubber (manufactured by Fujipoly)	3.7 ~ 5.4
Mica	14
Polyester	3.4
Polyethylene	6.0

• Low Thermal Resistance and Stable Thermal Resistance Variation
SARCON is elastic, providing a perfect tight fit on uneven surfaces. Therefore, there is no need to use conventional gap-sealing and filling agents such as grease to bring out the superb high heat conductivity and outstandingly low thermal resistance and stable thermal resistance variation that are the hallmark of our SARCON.



• Usable over a Wide Temperature Range (−60°C ~ 180°C)
Thanks to its superior resistance to heat and cold, SARCON is ideal for use in a wide temperature range, throughout which it maintains its outstanding electrical properties, such as the excellent electrical insulating properties characteristic of silicone. Nor does it present any significant variation in its physical properties. SARCON is distinguished by a whole range of other outstanding properties, such as excellent resistance to weather, arc, corona discharge, ozone and chemicals.

DESIGNER'S NOTES

Atlee laminated bus bars consist of flat conductor layers stacked on one another and separated by appropriate dielectrics. Typically such an assembly is laminated and edge-sealed or encapsulated so that the final product becomes a rigid unit with high reliability and stable electrical and mechanical properties. These properties provide uniform capacity, low impedance, and high-speed transmissions of signal and current. Atlee bus bars are an economical alternative to multi-layer printed circuit boards and wire harnesses. They offer:

- **Lowered production costs,** because assembly is simple and fast.
- **Reduced volume** which permits higher density packaging than possible with wire harnesses.
- **Reduced noise** with ideally distributed capacitance and isolation of conductors.
- **High current-carrying capacity.**
- **Low impedance and inductance.**

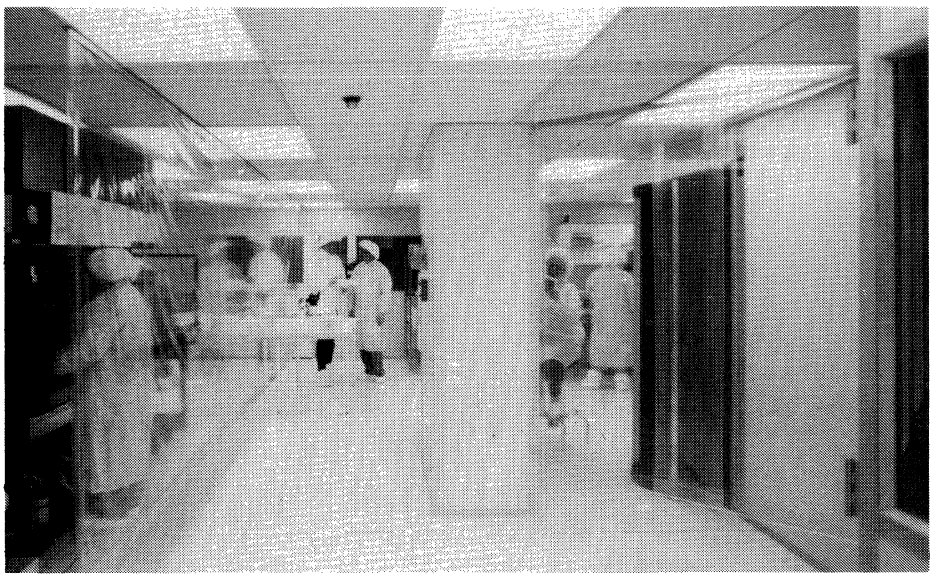
High Density Interconnect



Electro-Films High Density Interconnect Products Group manufactures low cost semiconductor packages and interconnect devices. The company is market leader in the development of polymer interconnect devices, in particular advanced packages for electronic components (APECs). The company also manufactures chip-on-board, pin grid arrays and MCM-L products.

Electro-Films has four facilities world wide all involved with High Density Interconnect. The Ashford, Middlesex, England site has a 4500 sq ft clean room with full air filtration and air conditioning including humidity control. This area is used for the Dry film laminating, Yellow room exposure and Film developing which are critical in obtaining reliable fine line geometries.

APECs

Advanced Packages for Electronic Components

APECs have significant technological advantages over ceramic products including major benefits in packaging such as reduced weight, decreased size, higher interconnection density and lower cost.

Developed as a non-hermetic cavity package, APECs are manufactured using printed circuit board techniques and are the latest development in surface mount packaging of integrated circuits. The APEC carrier has a wide range of applications:

- industrial, custom military, commercial and telecommunications
- VLSI chips
- MMICS
- custom IC packaging

APECs have almost perfect thermal match to ordinary PCBs and glass epoxy substrates and their superior electrical characteristics give faster rise times and lower

propagation delay, ie as low as 25ps. Accelerated life tests (108°C, 90% RH), which have been undertaken indicate high reliability. Glass epoxy APECs allow larger configurations without fear of breakage. Users have a choice of thermal resistance from 92° c/w for standard packages down to two, 30° c/w and 4° c/w for the low thermal packages.

APECs offered:

Custom Specific

Electro-Films also offer a service for customer specific packages where the company will undertake the full development project from design concepts, through prototype development and test, to full manufacturing production runs.

Electro-Films High Density Interconnect Products group continues its development programs of APEC devices including manufacture using high temperature materials such as polyimide and other high performance resins. Multilayer versions including advanced heat sinking, cavity-down and PGA format APECs are also in development.

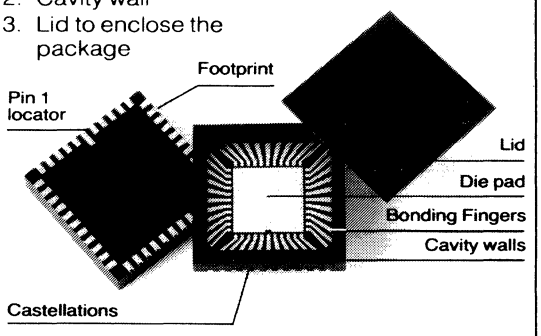
Chip-on-Board (COB)

Chip-on-Board substrates are probably one of the most cost effective ways to package and interconnect silicon chips especially ASICs. One can consider the substrate as being the package for the chip as well as the interconnect media for other components such as SMDs.

With the Electro-Films multilayer process up to 400 cm per sq cm (1000 in per sq in) of interconnect can be obtained. As well as there being various laminates to suit most purposes, COB offers very good design flexibility in that most shapes and sizes can be accommodated.

APEC consists of 3 parts:

1. Metallised base
2. Cavity wall
3. Lid to enclose the package



Pin Grid Arrays (PGA)

Electro-Films produce patented designs as well as standard PGAs. These can be single layer or multilayer according to price and reliability requirements. In some designs the chips are mounted direct to a copper heat sink which forms an integral part of the PGA.

Pin Bar®

Pin Bar is a precision solderless "gas tight" bus bar that replaces wire wrapping, termi point or solder connections on chassis with common spaced connectors and common function pins. Pin Bar's performance, reliability and low cost virtually eliminate most engineering and production assembly problems associated with pin-to-pin busing.

Pin Bar performance is superior to wire busing in every electrical and mechanical parameter.

- **Lower Contact Resistance**—two times larger gas tight contact area.
- **Uniform Contact Resistance**—"Spec" contact pressure means ultimate uniformity, reduces noise, gives excellent high frequency response.
- **Lower IR Losses**—larger conductive area, constant cross-sectional area and no material removed means higher capacity and less heat.
- **Less Space Required**—greater pin exposure both vertically and horizontally.

What this means to you is your bus manufactured to exact specifications (one orifice to each pin) providing "mistake-proof" terminations at higher production rates using non-skilled assemblers while eliminating continuity checks. No wire prep, no tool maintenance, no capital equipment or bulky stock.

Higher reliability with better performance at less cost per termination. **PIN US DOWN** and we'll be privileged to prove it.

MIL SPEC TESTS

LSI Pin Bar meets or exceeds the following MIL-STD-202 "D" tests (full report available).

- **Thermal Shock**—Method 107, Condition A.
- **Mechanical Shock**—Method 213, Condition H.
- **Vibration**—Method 201.
- **Corrosion Resistance**—Method 101, Condition B, 48 hour exposure to salt spray.
- **Contact Voltage Drop**—0.533 Millivolts maximum per amp.
- **Gas Tight Contact**—Tested 10 minutes with 1:1 hydrochloric/nitric acid followed by 10 minutes of ammonium sulfide fumes.

YOUR MAGNETIC SHIELDING PROBLEMS END HERE!

Request AD-VANCE Magnetics' new 84-Page Procurement Catalog/Engineering Manual; offers magnetic shielding users the major technical guideline data needed to design or choose the optimum magnetic shielding solution for a given application.

CUSTOM FABRICATED SHIELDS FOR COMPONENTS AND SYSTEMS

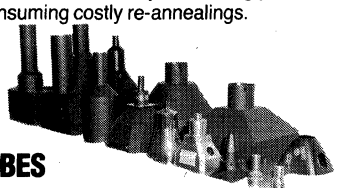
Any Specified Configuration or Shielding Requirement

From the simplest component to the most complex system, Ad-Vance Magnetics can design and fabricate an AD-MU shield incorporating your magnetic shielding performance requirements.

These include magnetic isolation chambers, shields for low field research, magnetic shielding components required in systems (such as CRT's), transformers, motors, tachometers, reed relays and computers, dewars for cryogenic research, various test chambers, video cameras, scan converter tubes, photomultiplier tubes, storage tubes, aircraft weather radar display tubes, etc.

Lasting shielding protection is provided because AD-MU alloys do not saturate when properly used, will not suffer excessive permeability loss from shock, and display minimum retentivity. Accordingly, there is no need for repeated time consuming costly re-annealings.

AD-MU CUSTOM FABRICATED SHIELDS FOR CATHODE RAY TUBES



Enhance CRT performance by eliminating effects of external magnetic fields on the electron beam.

Ad-Vance already owns tooling for many types of magnetic shields used during the past quarter century, making tooling savings possible. Or, our Engineering Dept. will gladly help design and produce the optimum shield for your application.

AD-MU TAPE DATA PROTECTORS ASSURE FIDELITY OF VALUABLE TAPES

1 Assure fidelity of vital recorded information by keeping data on magnetic tapes free from distortions caused by unforeseen external magnetic fields.
2 Minimize erasure accidents during safekeeping or transport.
3 Discourage and deter the covert saboteur or vandal.
4 Excellent insurance against possible expensive, or irreplaceable losses.

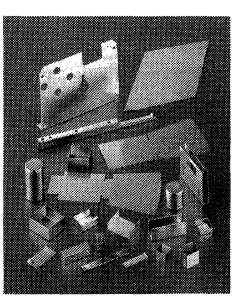
"What's Ad-Vance's industry and market position?"

Ad-Vance is the industry's largest, oldest and most experienced firm exclusively manufacturing magnetic shielding. Products from its factory are used off-planet in spacecraft and satellites as well as world-wide in exacting industrial, military, laboratory and consumer applications.

AD-MU SHEET STOCK — DELIVERY FROM STOCK

- For your in-house designing and manufacturing convenience.
- Easy to work, bend, stamp, draw, finish, etc. on ordinary sheet metal working equipment. SHIELDS MUST BE HEAT TREATED before end use or further finishing by plating, painting, etc.

JUST CUT AD-MU FOILS TO THE EXACT SHAPE YOU NEED



These Time-Saving High and Low Permeability Foils offer convenient, economical magnetic shielding. In many applications, their use can eliminate the costs of designing and manufacturing pre-fabricated shields. Foil shielding is also useful in hard-to-get-at-places. In addition, it permits more compact assemblies, accomplished by placing magnetically reacting components closer together with no performance degradation.

The foils exhibit useful ductility, so are readily hand trimmed to your desired outline on an ordinary cutting board, or with shears. They are then easily hand formed around the structure or component to be shielded. Simple adhesive tape can be used to hold them in place. They have already been properly heat treated so are ready for immediate use.

The Problem Solving Magnetic Shielding Specialists—4 Decades of Magnetic Shielding Leadership

If we'd been there, maybe the Pterodactyl wouldn't have crashed...

...at least not the radio-controlled mechanical replica built for the Smithsonian Institution. While it flew successfully twenty-one times over the deserts of California, on its first flight near Washington, D.C., the pterodactyl lost control and crashed.

It was determined that an electromagnetic device on the ground had interfered with the model's electronic control components. Appropriate magnetic shielding might have saved this pterodactyl from extinction.

For over twenty-five years, Amuneal has provided electromagnetic interference solutions for military, medical, scientific, industrial and commercial applications. You'll find our products in CRT displays and defibrillators, in computers and spacecraft, in scientific instrumentation across every frequency and spectrum, and in hundreds of specialized applications. Working with our customers, the list grows daily.

If you need magnetic shielding, we can supply you with a single prototype unit or a large production run—and we do it on time and competitively priced.

Give us a drawing of the device you want shielded and we'll select the proper alloy and suggest the most cost-effective way to design, fabricate, hydrogen anneal, and test your shield. All Amuneal products are manufactured, annealed in-house and inspected to MIL standards.

Amuneal scientists also conduct on-site magnetic surveys and can recommend the best solution to your shielding problem.

We provide immediate delivery from stock on Amumetal (80% Ni) and Amunickel (49% Ni) in both sheet and foil, sheared to your size requirements. Sheet is available in thicknesses from .014″ to .062″. Foil, in thicknesses from .002″ to .010″. All material can be delivered hydrogen-annealed for maximum permeability and attenuation.

For your next component, enclosure or room shielding requirement, call or write Amuneal.

We're liable to keep your project from crashing.

MAGNETIC SHIELDING DEVELOPMENT AND EXPERIMENTAL KIT

This kit provides design engineers with various sizes and shapes of amumetal shielding alloy. All nine components are fully hydrogen-annealed to provide optimum EMI shielding properties.

SARCON® THERMAL-CONDUCTIVE AND FLAME RETARDANT SILICONE RUBBER

SARCON® Products are Vital Electronic Components

A unique new product range developed on the basis of our proprietary technology—SARCON is a completely novel type of silicone rubber combining high thermal conductivity and superior flame-retardancy with the inherent properties of silicone rubber such as heat resistance and electrical insulating properties.

In recent years, the fast rate at which electronics and computer technology have spread through day-to-day life, has led to the need for more powerful semiconductor devices and more compact and lightweight products. Our Fujipoly silicone rubber, developed to meet these needs, has already earned itself a high reputation among many users, praising it as a revolutionary rubber-type electrical insulatant.

Its applications span a constantly growing range as thermal conductive insulators for semiconductor devices, compression jointing materials for thermistors and temperature sensors, and as a thermal conductive material for all types of heaters.

SARCON is the most outstanding product from our state-of-the-art production facilities, with micro-unit accuracy standards and a molding technology of the highest level that has taken us years to perfect. Apart from sheet, SARCON is also available in tape, tube and cap form and can be supplied with an adhesive. To let the user choose the best suited product for his purpose, application, and conditions, it comes in two grades with or without adhesive, and in four types: TR, HR, GTR, and GHR.

Tailor-Made for a Perfect Fit with Users' Needs

• General Type—SARCON TR
Press and extrusion molding permit the manufacture of any type of intricate shape, whether cap, sheet, tape, or tube-shaped, to precisely meet practical needs.

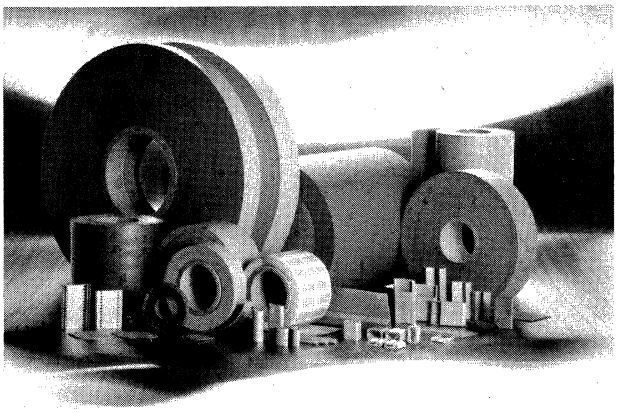
• High-Heat Conductive Type—SARCON HR
Thanks to the inclusion of a special fine ceramic ingredient, this high-grade type of SARCON offers remarkably improved thermal conductivity.

• Reinforced type—SARCON GTR • SARCON GHR
These particular reinforced grades have a 0.05mm thick glass cloth layer laminated onto TR and HR to provide a dramatic increase in physical strength characteristics such as tensile and tear strength.

For improved ease of handling, we also offer our SARCON AD series which corresponds to the SARCON GTR and GHR but with the application of an adhesive coating.

Wide Range of Applications

- Especially for use as electrically insulating heat-dissipating spacers in power transistors and semiconductors such as ICs and LSIs
- For use as electrically insulating heat-dissipating spacers in thermistors and posistors.
- Ideal for electronic jars, panel heaters, etc.
- For use as an electrical insulator in temperature fuses and temperature sensors, or as a high/low temperature heat transfer medium.
- Ideal for microwave ovens, panel heaters, ceramic heaters, etc.
- As a replacement for molded silicone-rubber parts in applications with a heat gradient. Ideal for insulating plates around microwave ovens and magnetrons, transformers, etc.
- Ideal for TV, video, stereo, Compact-Disc players, stabilized power supplies, computers, brushless motors, etc.

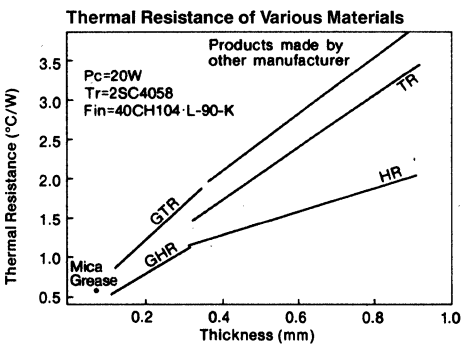


SARCON® Offers Superior Properties with a Host of User Benefits

• High Heat Conductivity
SARCON has a thermal conductivity eight times that of conventional silicone rubber, three times that of mica, and twelve times that of polyester.

Product Description	Thermal Conductivity ($\times 10^{-4}$ cal/cm·Sec·°C)
SARCON HR	41
SARCON TR	29
SARCON GHR	34
SARCON GTR	22
General silicone rubber (manufactured by Fujipoly)	3.7 ~ 5.4
Mica	14
Polyester	3.4
Polyethylene	6.0

• Low Thermal Resistance and Stable Thermal Resistance Variation
SARCON is elastic, providing a perfect tight fit on uneven surfaces. Therefore, there is no need to use conventional gap-sealing and filling agents such as grease to bring out the superb high heat conductivity and outstandingly low thermal resistance and stable thermal resistance variation that are the hallmark of our SARCON.



• Usable over a Wide Temperature Range (– 60°C ~ 180°C)
Thanks to its superior resistance to heat and cold, SARCON is ideal for use in a wide temperature range, throughout which it maintains its outstanding electrical properties, such as the excellent electrical insulating properties characteristic of silicone. Nor does it present any significant variation in its physical properties. SARCON is distinguished by a whole range of other outstanding properties, such as excellent resistance to weather, arc, corona discharge, ozone and chemicals.

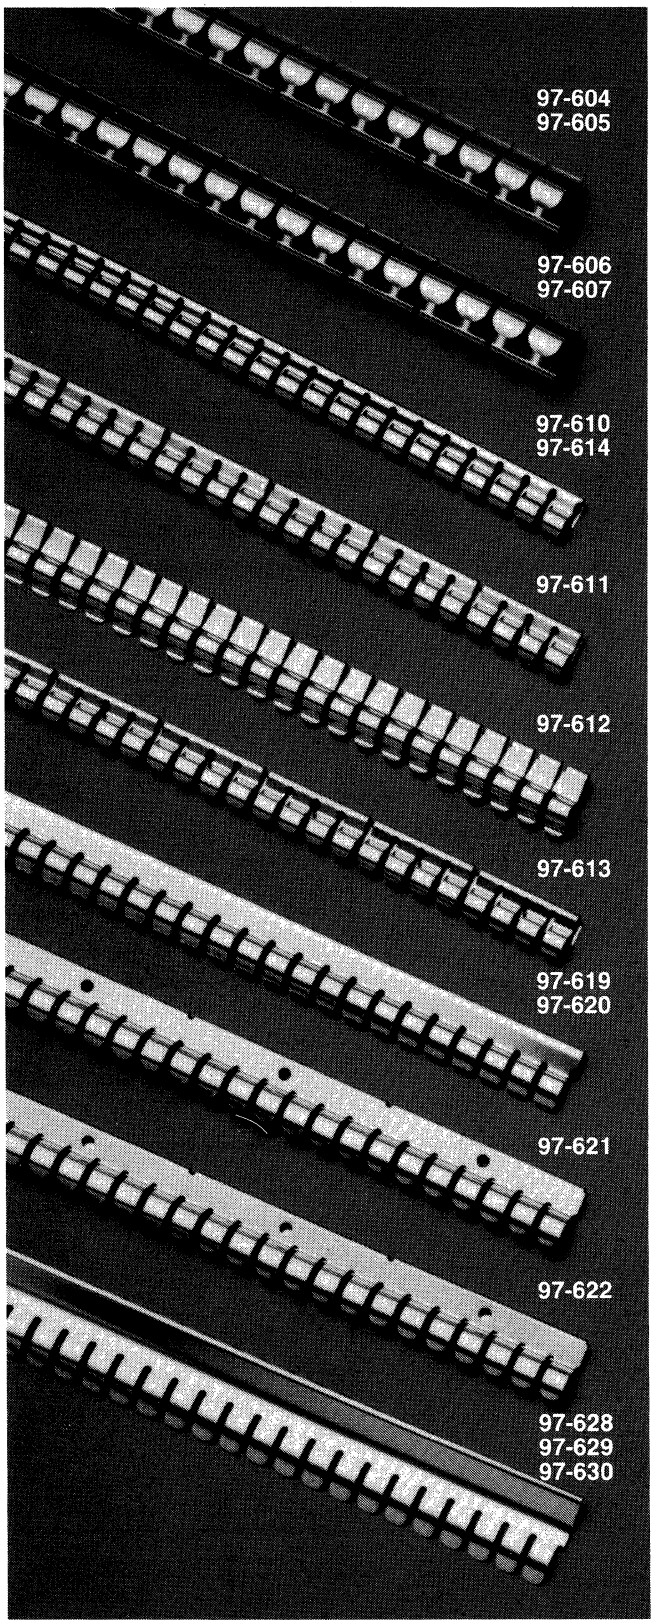
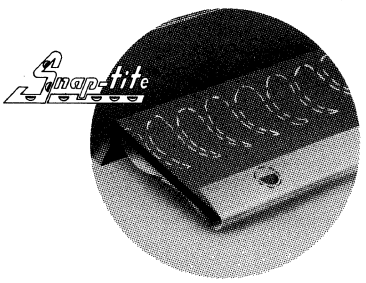
Shielding Clip-On Gaskets



This Series from Instrument Specialties is designed for use where high temperature or other design considerations preclude the use of adhesive-mounted gasketing. Yet it provides the same shielding characteristics and effectiveness as our Sticky Fingers® mounted series. Clip-on gaskets offer shielding effectiveness > 100 dB at 100 MHz plane wave. All are available in standard 16″ (406 mm) lengths, and in your choice of finishes.

Snap-tite™, with "D" lance

This configuration has been designed specifically to provide outstanding holding power. "D" lances snap into drilled or punched holes in the mounting surface to create a strong omnidirectional grip with excellent conductivity.



Grip-tite™, with "T" lance

Ideal for use with softer materials, such as aluminum or plated plastic, sharp "T" lances bite into the mounting surface and preserve electrical conductivity.

Parts may be supplied with holes for cleaning and plating purposes. These holes will not affect the overall performance of the product.

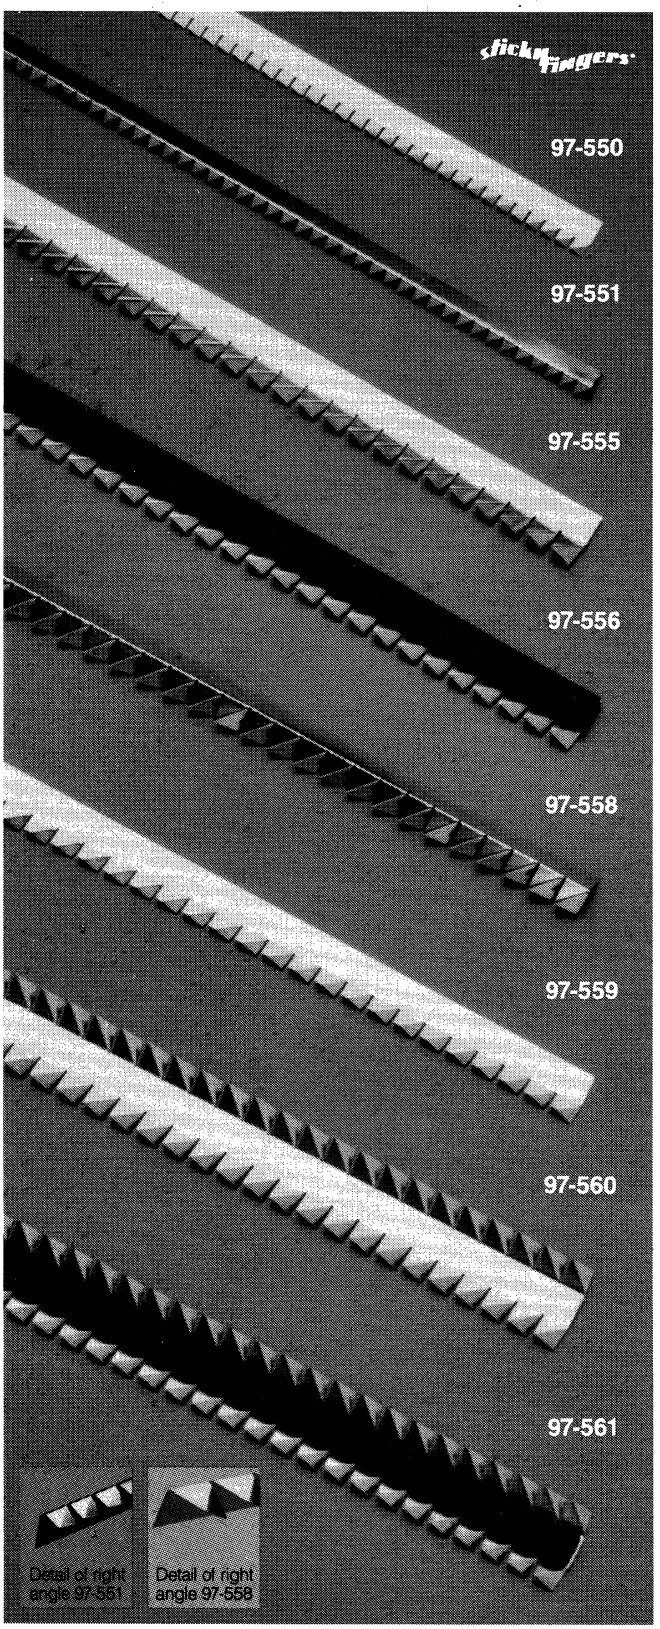
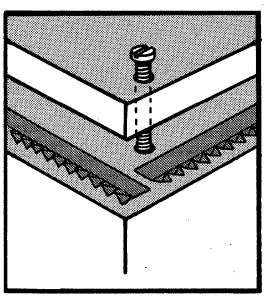
Shielding Twist Series





Self-adhesive beryllium copper contact strips with scientific twist design offer narrow electronic gaskets for general shielding applications.

Four different widths are available to suit your specific application for single edge contact strips. Also available are two 90 degree versions (Series 97-551 and 97-558) to provide alternate mounting capability. Series 97-555, 97-558, and 97-559 provide shielding effectiveness > 100 dB at 100 MHz plane wave, ideal for all types of panel or electronic enclosures. Series 97-550, 97-551, and 97-560 provide shielding effectiveness > 115 dB at 100 MHz plane wave. Series 97-560 strips are especially suitable for cabinets with panel-divider bars. Their unique double-edge design permits panels to be removed easily and replaced without damage to the installed strip.

All Twist Series strips are furnished in 24″ (610 mm) lengths. Strips except 97-551 and 97-558 are also available in standard 25-ft (7,6 m) coils. Right angle product configurations are not available in coils. All are available in your choice of finishes.

Poron environmental rubber gasket

Series 97-556 and 97-561 are versions of 97-555 and 97-560, respectively, incorporating a Poron rubber gasket to act as an environmental shield, offering a high degree of protection against dust and moisture. All are available in your choice of finishes.

Parts may be supplied with holes for cleaning and plating purposes. These holes will not affect the overall performance of the product.

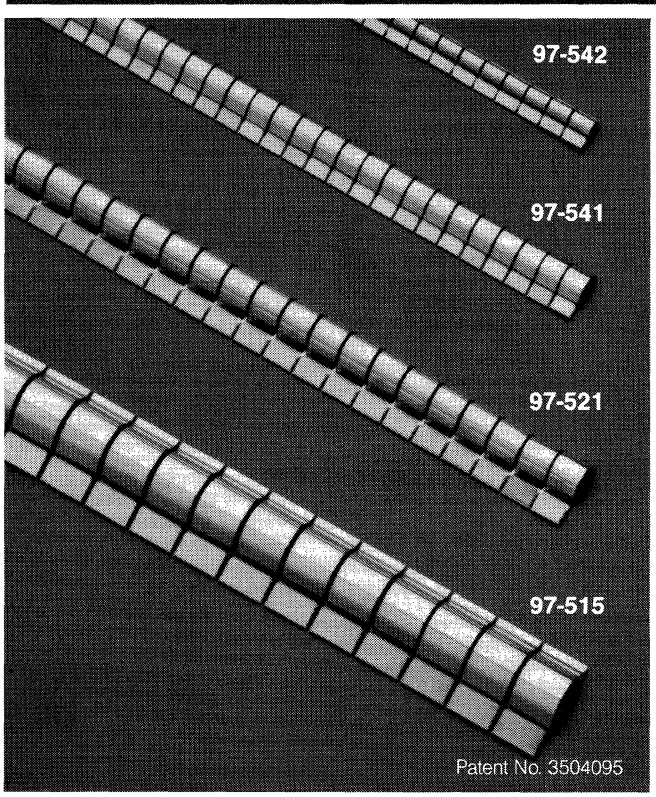
Shielding — Foldover Series



This version of Sticky Fingers® beryllium copper shielding gaskets features a special U-shaped end that permits the finger of the strip to slide when enclosure doors are closed. It also retains the strip's fingers when enclosure doors are open, thus preventing accidental damage to the strip's fingers. Shielding effectiveness is > 115 dB at 100 MHz plane wave.

Four models provide you a choice of widths to suit your application. They are available in standard 16″ (406 mm) lengths, except 97-515 which is furnished in 24″ (610 mm) lengths. Also, all styles are available in continuous 25-ft (7,6 m) coils, and in your choice of all finishes except tin lead and satin tin.

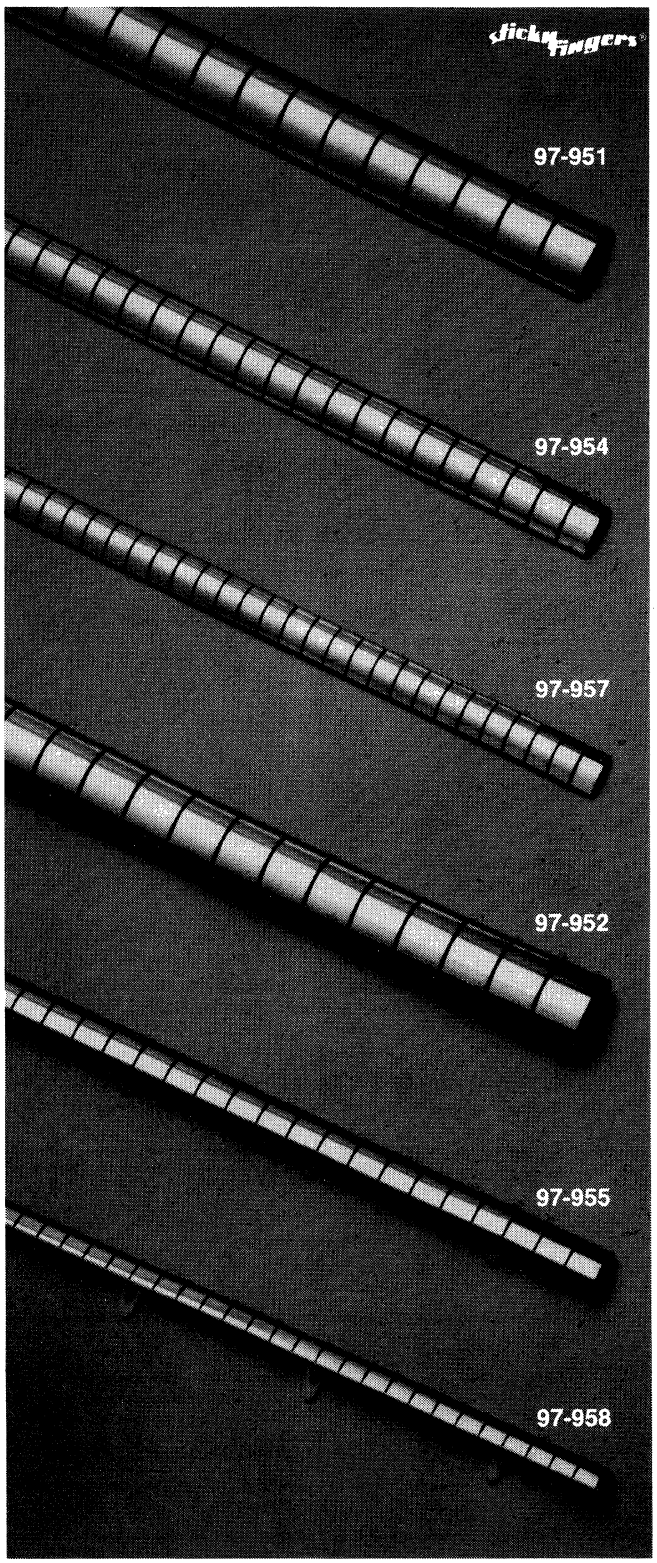
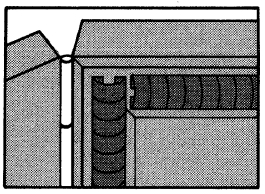
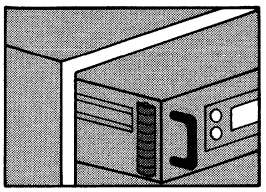
Shielding — Symmetrical Slotted Shielding (S³)



Strips with Sticky Fingers and rivet mounts exhibit typical attenuation >100 dB at 100 MHz.





With Sticky Fingers®

Series 97-951/954/957 are low-compression, adhesive-mounted beryllium copper shielding strips. Designed as a continuous band, the strip is slotted to permit spring contact throughout its length. A wide radius profile creates the greatest contact for maximum conductivity with minimum compression requirements. As with all Sticky Fingers® shielding strips, a self-adhesive tape makes mounting easy and secure. All are available in your choice of finishes.

With bi-directional rivet mount*

Series 97-952/955/958 are as described above, but with the addition of an integral pierced track to provide plastic push rivet mounting in a .125″ (3,2 mm) diameter hole.

Designed especially for slide applications, this configuration allows total symmetrical compression action with bi-directional engagement. It is recommended for high-temperature and/or extremely high side-load situations, such as PC board connections and electronic drawers. All are available in your choice of finishes.

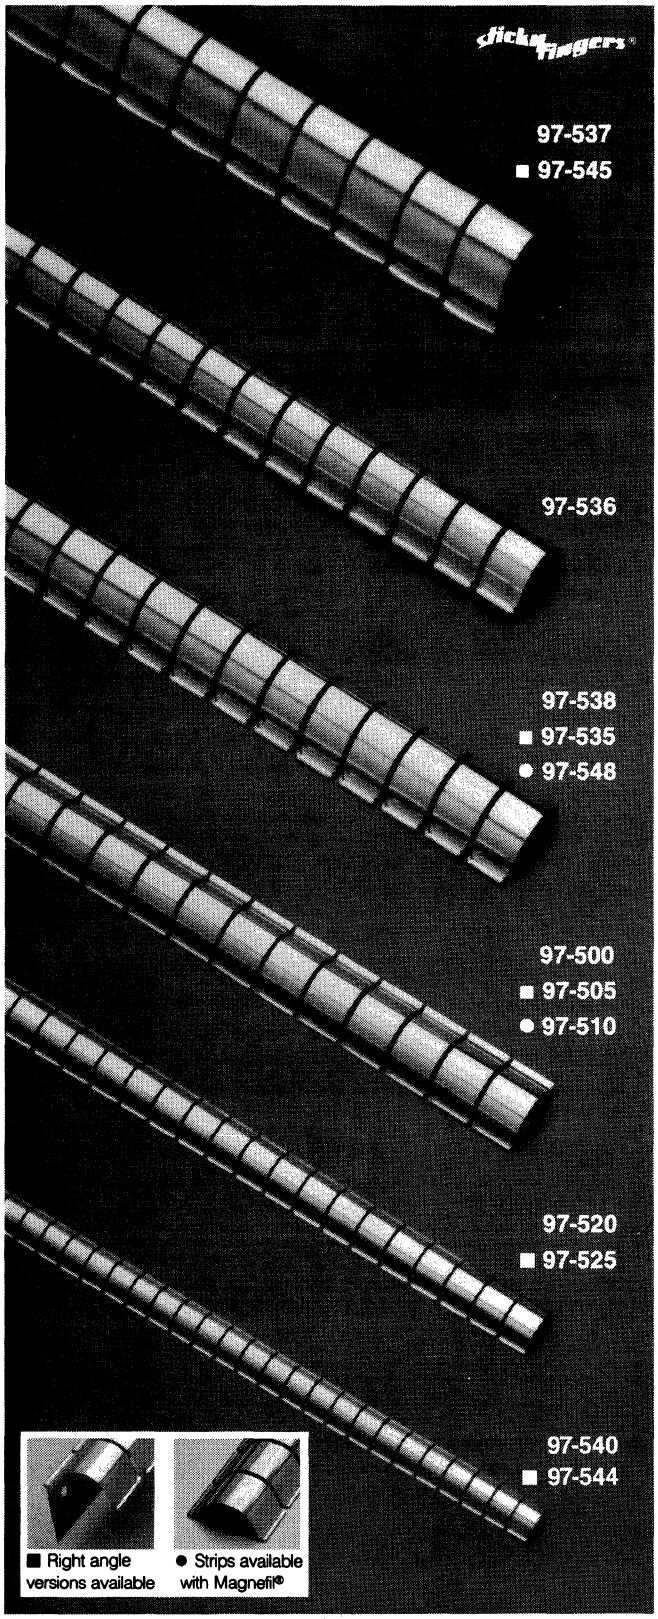
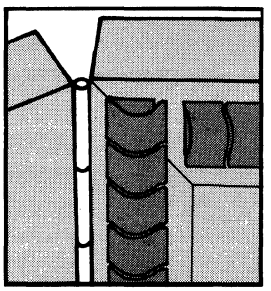
Shielding All-Purpose Gaskets



Patent No. 3504095



These versatile gaskets are made from high-performance beryllium copper with Sticky Fingers® self-adhesive backing. They provide an extremely tight, instant bond, and are ideal as an all-purpose contact strip for metal cabinets and electronic enclosures, particularly where space is critical.

Shielding effectiveness of these strips has been proven to be > 46 dB at 14 kHz magnetic, and 108 dB at 10 GHz plane wave. When tested per MIL-STD-285 for electromagnetic shielding, these strips showed superior performance under minimum compression. They proved to be especially effective where variations exist in the space to be shielded, and in applications that require high shielding performance despite frequent opening and closing of the cabinet.

Strips 97-500 and 97-538 are furnished in standard lengths of 24″ (610 mm), and in continuous 25-ft (7,6 m) coils. Series 97-520 and 97-540 are supplied in standard 16″ (406 mm) lengths and in 25-ft (7,6 m) coils. Strips 97-537 are in 12″ (305 mm) lengths. All are available in your choice of finishes.

Please note that designated strips are available with Magnefil®, a rubber strip filled with magnetic absorbing particles, and inserted within the curve of the fingers. Magnefil provides increased magnetic field shielding.

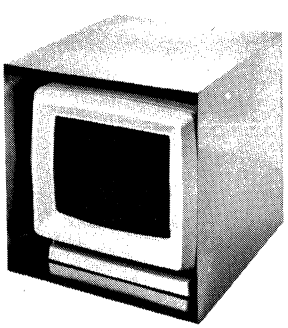
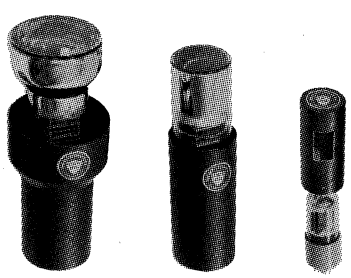
Monitor Enclosures

CO-NETIC magnetic shield enclosures protect CRT monitors from magnetic fields (DC to 100 kHz) that cause shimmy or jitter of the display. Image distortions are often caused by high current industrial or electric power equipment, particularly in color and high resolution monitors. Engineering provided by specification guide CM-1





Photomultiplier Shields

CO-NETIC magnetic shields improve the amplification characteristics of photomultiplier tubes by providing significant attenuation of magnetic fields. Effective shielding is ensured over a wide range of field intensities. When grounded, the shields provide protection against electrostatic interference. Catalog lists all current photomultiplier tubes and recommended shields. Custom shields available. Request catalog PM-5

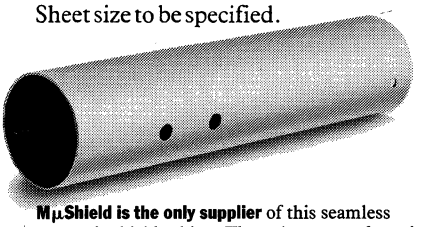
Coils, sheets and tubing in stock

- High saturation shielding. Permeability ranges from 200 to 50,000. Saturation point between 18,000 and 20,000 gauss.
- Medium permeability shielding. Permeability from 12,500 to 150,000. Saturation point approximately 15,000 gauss.
- High permeability shielding. Permeability from 80,000 (at B-40) to 350,000. Saturation point approximately 7,500 gauss.
- Dimensions:

Coils — .004", .006", .010" thickness; 8" and 15" widths. Minimum order $100.

Sheets — Cold rolled annealed, .015" to .060" thickness. Full sheet 30" × 10'. Minimum order 30" × 36".

Hot rolled, .090" to .265" thickness. Sheet size to be specified.



MμShield is the only supplier of this seamless magnetic shield tubing. The unique manufacturing process eliminates the non-uniformity of permeability inherent in welded tubing.

Tubing — .10" to 2.00 ID. Wall thicknesses .010" to .060". Lengths to 20'.

Heat treating service.
Gives magnetic materials optimum permeability with low shock-sensitivity. Permeability and uniformity of MμShield-fabricated parts are guaranteed.

BRIM WIRE — CABLE — TUBING — HARDWARE
ELECTRONICS, INC. FAIR LAWN, N.J. 201-796-2886

BRIM CHV CORONA RESISTANT HIGH VOLTAGE TEFLON* CABLE

BRIM CHV eliminates the need for bulky, thick insulation, as used with silicone rubber high voltage cables, and provides high temperature resistance not available with polyethylene insulated high voltage cables, plus the added benefit of retarding and detering corona discharges. Even under severe stress, including mechanical strain, moisture, corona or chemical, or high temperature conditions, there is no cracking of the insulation. Cable construction meets and exceeds MIL-W-16878D.

OPERATING VOLTAGE: Voltage capabilities are based on the thickness of the jacket.

OPERATING TEMPERATURE: −90°C to +250°C

DESCRIPTION: Silver plated copper conductor, per QQ-W-343, special corona retarding insulation, TFE tape wrap insulation, & a color coded jacket overall.

STD. COLORS: Red, White, Black, Green, Blue, Yellow, Orange, Brown, Purple, Gray. Stripped colors are also available.

STD. P-U: 250′, 500′, 1000′. * DuPont

CONTROLLED IMPEDANCE CABLE — ELECTRONIC LACING CORDS & TAPES

BRIM BRIBBON™ 100 OHM CONTROLLED IMPEDANCE CABLE — UL 2651

DESCRIPTION: Flexible .010" UL VW-1 PVC insulation over 28 AWG 7/36 TC conductors, laid parallel. All conductors are colored Gray, with one edge Red for polarity identification. MEETS UL 2651.

BRIBBON™ cables are designed for fast, mass termination to all standard .050" IDC connectors. Double contour allows reverse plane terminations. Easy conductor separation for circuit routing, and uniform breakouts for harness production.

BRIBBON™ cables replace bulky round twisted paired cables, providing easy routing & greater space utilization within confined chassis. Precise spacing for controlled electrical characteristics — controlled crosstalk thru precisely controlled impedance and capacitance.

CONDUCTORS:
28 AWG (7/36)
Stranded Tinned Copper

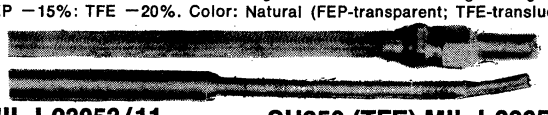
HEAT SHRINKABLE TUBINGS: BRIFLON™ TEFLON • TEFZEL – SILICONE RUBBER TUBING

SH200, SH250, SH254 & SHTF tubings have excellent resistance to weathering, chemicals (oils, fuels, solvents, acids, alkalis, fluids), & fungus, are non-corrosive, low water absorption (.01%), will not burn nor support combustion, have hi dielectric strength (850V/MIL dry), low dielectric constant, & a very low coefficient of friction. Hi mechanical strength yet flexible. (Low temp. flexibility −67°C). Their excellent electrical characteristics remain stable throughout their electrical range. Longitudinal change with full shrinkage: FEP −15%: TFE −20%. Color: Natural (FEP-transparent; TFE-translucent).



SH200 (FEP) MIL-I-23053/11

SH200: an extruded modified FEP (Fluorinated-Ethylene-Propylene) Teflon* tubing, with a continuous Oper. Temp. of +205°C (400°F). SH200 completely shrinks at 350°F (partial shrinkage possible at 200°F). Shrinkage ratio — 1.3:1.. It melts at 525-563°F so it can be used to encapsulate. Now many sensitive components, parts, devices, etc. can be protected with Teflon*. Fills void between the hi temp. of TFE, and low temp. of PVC and polyolefin tubings.

SH254 4:1 SHRINKABLE TFE

SH254 tubing can recover to approximately ¼ of its expanded size when heated to its "gel" point (621°F-625°F). Because of its exceptional shrinkage capability, its recommended that the outside diameter of the object to be shrunk down upon should not be more than 50% of the expanded I.D. of the size of the tubing used. Many constructions conform to AMS 3584 and MIL-I-23053/12 class 5. SH254 is non-flammable, non-corrosive, and offers all of the other outstanding electrical, chemical, and mechanical properties of Teflon*. * DuPont

SHTF SHRINKABLE TFE/FEP

SHTF is made with a combination of TFE and FEP Teflons*. The inner wall is made of FEP and the outer wall of TFE. When the tubing is heated, the TFE begins to shrink down tightly over the FEP. The FEP inner wall melts and flows-squeezes-into and around the item covered, creating a solid or near solid encapsulation. The fit is so tight that it is safe against most environmental hazards, involving pull or vibrations. It can be used as a strain relief, or moisture-proof covering for wires, connectors, terminals, splices, electronic devices, etc. SHTF is non-flamable, non-corrosive, and offers all of the other outstanding electrical, chemical, and mechanical properties of Teflon*. Color: Natural (Transparent). OPERATING TEMPERATURE: −85°F to +450°F.

SHRINKABLE E-TFE TEFZEL* TUBING — MIL-I-23053/14

Designed for ruggedness. Excellent chemical resistance and high dielectric qualities which exist over a wide temperature range. Superior to Teflon* in its mechanical strength. Shrink Ratio-1.5:1. Shrinks quickly on application of only 300°F (150°C). Because of its quick shrinking ability at a relatively low temperature, many heat sensitive components and materials (solder joints, plastics, wood, metal) can now be easily protected. It is also heat sealable, chemically inert, self-extinguishing (non-flamable in air). Dielectric Strength: 400V/MIL. Uses: cable jacketing, wire markers, terminal covers, temperature probes, immersion tubing, heat exchanger coils, sight glasses, roll covers, chafe guards, component insulation. STD. COLOR: Translucent.

LOW & HI TEMP. PVC TUBING PER MIL-I-631 & MIL-I-7444 STOCKED.

SHRINK RATIO: 2:1 (50%) — OPERATING TEMPERATURE: −20°C to +105°C

SH110 meets or exceeds the performance requirements of MIL-I-23053/2B, Class 2 but for its dimensions — its heavier wall. SH110 is a Heavy Wall Shrinkable PVC tubing, yet its flexible, and will shrink at temperatures below 200°F (within one minute). Provides outstanding dielectric and mechanical protection without damage to enclosed or adjacent components, even around sharp bends. Longitudinal shrinkage: approximately 20%. SH110 is self-extinguishing, resistant to fungus, moisture, sunlight, and most oils, and chemicals. Dielectric Strength: 600V/MIL min,. ASTM-D922. Suitable as a heavy duty all-purpose shrinkable tubing that is less expensive, almost as flexible, and has a higher temperature ability than that of Shrinkable Neoprene tubing. Suggested Storage Temperature: Under 70°F for up to 10 months.

IRRADIATED PVC HOOK-UP WIRE

U/L STYLE 1429 • CSA AWM XLPVC • UL STYLE 1430

CSA REW XLPVC • MIL-W-16878D TYPE B & TYPE C • VW-1

Daburn's irradiated PVC Hook-Up wire is made from extruded polyvinyl chloride insulation which has been exposed to controlled radiation. This exposure causes the insulation to become far superior to ordinary PVC in temperature, abrasion and cut-through resistance. It can withstand direct contact with a soldering iron and it will not shrink back, melt or deform. Ideal for hi-density wiring.

One conductor, solid or stranded tinned copper, with irradiated PVC insulation (XLPVC.)
TEMPERAGE RATING: – 55°C to + 105°C (UL 1429 – 80°C, UL 1430 – 105°C.)
VOLTAGE RATING: 600V (UL 1429 – 150V). 1000V (UL 1430 – 300V.)

DABURN

These products represent a small segment of the Daburn multiconductor cable line. In addition to hundreds of configurations on our shelves for immediate delivery, a near infinite variety of designs may be fabricated to order. The broad spectrum of Daburn multiconductor is described at the bottom of this page. Ask for our latest master catalog containing complete specs for all Daburn products.
Two other configurations of the family shown below are the 2464 series with teflon impregnated jacket overall and no shield, and the 2430 series of shielded cable, without jacket.

DESCRIPTION: One or more conductors, each conductor silver plated concentrically stranded copper wire. Type E, MIL-W-16878E/4 extruded TFE .010" insulation. When shielded, braided silver plated copper shield over conductor(s), 90% shield coverage. When covered, either a TEFLON* impregnated fiberglass braid or a .010" TEFLON* fused, double tape jacket overall. Fungus, solvent, moisture, flame, acid, alkali and oil resistant. Multiconductors are twisted.
VOLTAGE RATING: 600V, VW-1.
TEMPERATURE RATING: -65°C to +200°C. For 250°C USE N.P. CONDUCTOR.

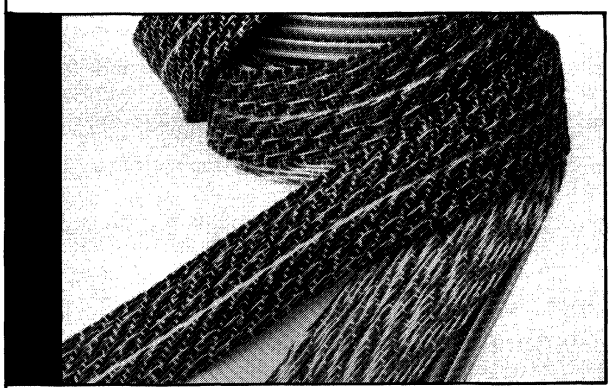
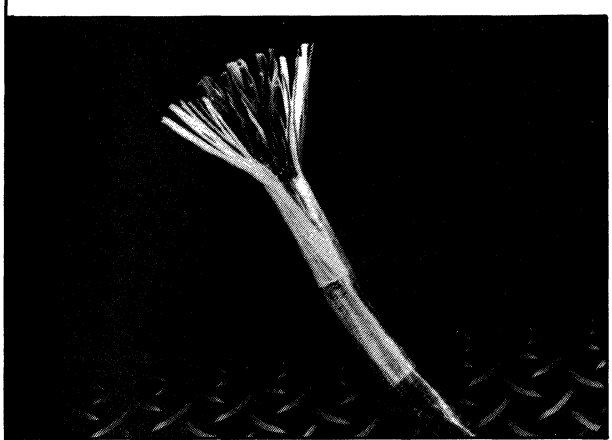
ELECTRONIC CABLE

GSI produces special cable for high technology applications where standard off-the-shelf products don't measure up. All cable products are made to exceed customer requirements and benefit from GSI's superior knowledge and experience in design, materials, system requirements and manufacturing methods.



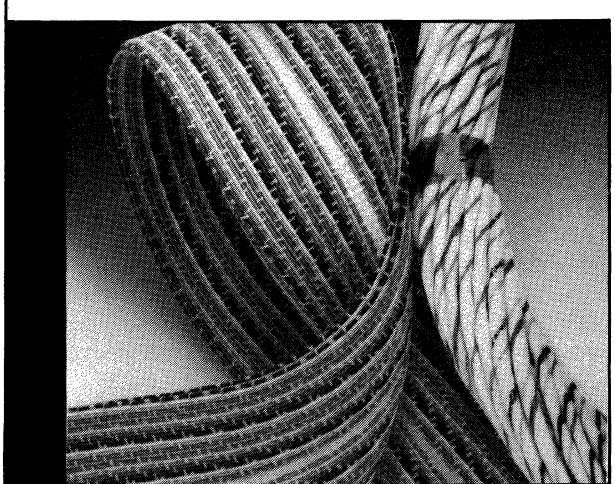
Flat Ribbon Cable ☐ This format saves space and weight and offers improved flexibility. Flat woven cable is designed for specific end-use applications and is frequently the best means of satisfying difficult mechanical, electronic and environmental system requirements.

- Precise center-to-center spacing
- Continuous or fixed lengths
- Any conductor size or formulation
- Twisted pairs and triplets
- Coax and other high-speed components



Flexible Round Cable ☐ The ideal round cross section electronic cable has a smooth surface, is perfectly round throughout its length, and can be bent with equal ease in any direction. GSI produces a cable with these features by winding layers of flexible conductors in opposite directions around a central core of twisted conductors.

- Contrahelically wound for ultimate flexibility
- Single or multiple foil or braided shields
- Engineered conductor positioning
- Braided or extruded jackets
- More compact and durable than other cable



Special Cable Options ☐ Whether flat or round, or a combination of the two, all GSI cable is designed and manufactured to order. Thus, any feature that is feasible can be specified and built into the end product.

- Special features to identify and separate conductors
- Flexibility through component selection and construction
- Flat cables with multiple layers of conductors
- Composite or metal braided or woven shields
- Certification to customer, UL, CSA or MIL specifications

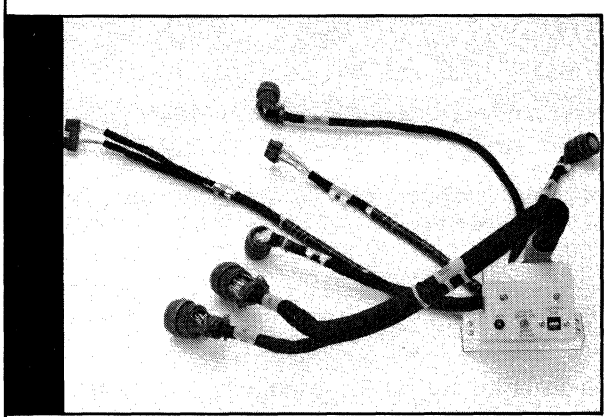
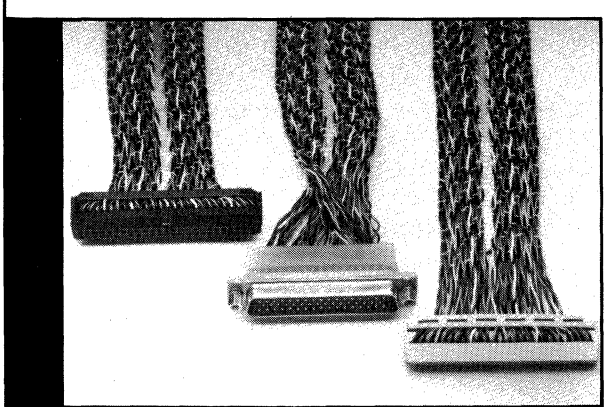
COMPLEX HARNESS ASSEMBLIES

From one-of-a-kind prototype harnesses to complex installed interconnection systems, GSI puts it all together. The most demanding assembly projects are delivered on time, complete and guaranteed free of faults, when GSI's wire management team takes on the job.



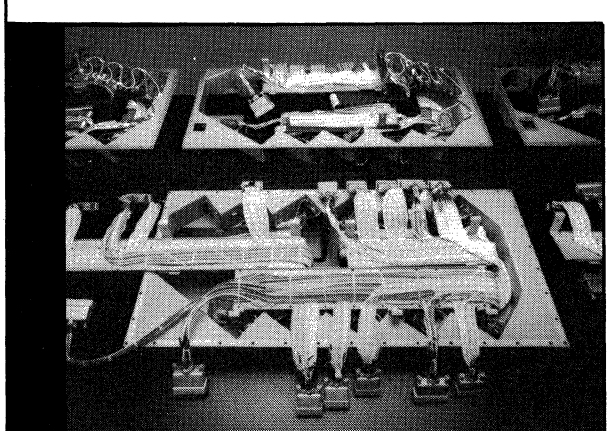
Branched Harnesses ☐ Many efforts have been made to eliminate the conventional wiring harness. The ROI wiring concept proposed for military aircraft is a contemporary example. But more often than not, a well engineered harness, incorporating superior materials and workmanship, is the best solution.

- Flat woven cable with programmed breakouts
- Contrahelically wound round trunk sections
- Hand laid and tied branches
- Shielding and jacketing
- Crimped, soldered and/or IDC terminations



Controlled Impedance Cables ☐ When test equipment and mainframe computers require something special in a transmission cable, they can get it from GSI. Controlled impedance, precise signal rise times, minimized attenuation and matched time delay are designed-in and guaranteed.

- Lower crosstalk than with any comparable product
- Closely matched impedance values
- A cable design to match each system
- Shielding and jacketing as required
- Comprehensive electronic testing



Other Harnessing Options ☐ Customers know that they can look to GSI for innovative solutions to difficult problems. An extra flexible round cable for the Space Shuttle and a flat spiral cable for the Stinger missile are but two examples of many products that have been developed from customer requests.

- Round to flat or flat to round cable transitions
- Special conductor marking or coding
- Complete systems integration
- Certifications for soldering and testing
- Space satellite capabilities

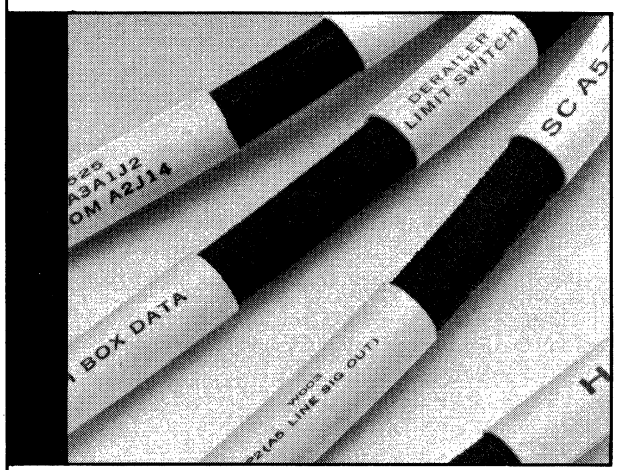
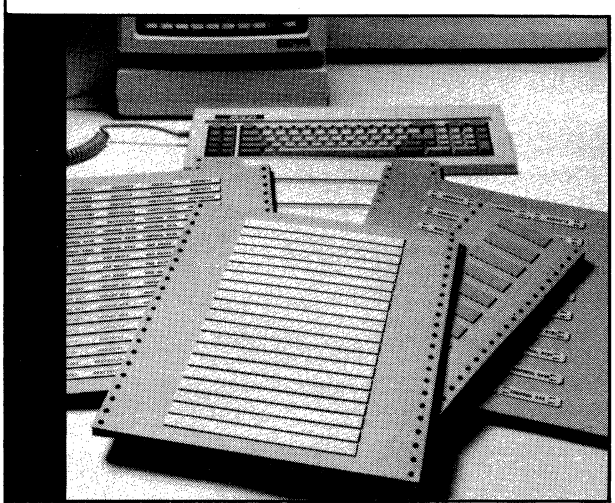
WIRE AND CABLE MARKERS HEAT SHRINKABLES

Long established as a supplier of wire markers, wire marking services and wire marking systems, GSI now also offers a comprehensive line of state-of-the-art heat shrinkable products and materials.



Wire and Cable Markers ☐ GSI has been producing wire and cable markers since 1962 and has no equal for quality, reliability and cost effectiveness. Marking methods include hot stamping and computer-generated dot matrix printing.

- Shrinkable or non-shrinkable tubing
- Cable ties and identification plates
- Colors and materials for any application
- A variety of character heights and styles
- Special logos and designs



User-Friendly Marking Systems ☐ GSI's Critchley HSI wire marking system employs user-friendly software and a choice of personal computers and printers. Heat shrinkable marker material is mounted on fan-fold computer paper giving users easy and complete control over their own marker production. This system offers an efficient and economical way of producing high quality permanent markers with MIL-I-23053/5 material.

- Lowest cost of entry among comparable systems
- Standard diameters to two inches, lengths to six inches
- No "permatizing" and associated hardware
- Negligable changeover costs from other systems
- No dedicated equipment for marking or installing

Other Heat Shrinkable Products ☐ A great variety of tubing formats is available from GSI in bulk form, in boxes or on spools. All shrinkables are made with superior materials and processes and display lower recovery temperatures, shorter recovery times, greater shrink ratios, more flexible materials and freedom from powdery residues.

- Halogen free polyolefins
- Flexible and semi-rigid Kynar
- PVCs and elastomerics
- Aluminized and convoluted tubing
- Termination sleeves

Pioneer in Irradiated Wire

Judd Wire is a high technology wire company, specializing in the use of electron beam cross-linked thermosets for wire insulation. By applying irradiation cross-linking technology to insulating materials, Judd Wire meets the needs of the wire and cable industry for economical, high-performance products.

Judd Wire manufactures electronic wire and cable in over 100 styles recognized by Underwriters Laboratory, Canadian Standards and/or Military Specifications.

These pages contain comprehensive listings of Judd Wire standard products, may of which are stocked in a variety of colors. For the stocking status of a specific product, please call Judd Wire.

PCA (80°C & 105°C XLPVC)

PCA is a diverse line of tri-rated electronic wire. Its polychloroalkene insulation is an exclusive irradiation cross-linked PVC with a unique combination if high-performance properties.

- **High heat and burn through resistance.** PCA insulation will not melt or flow at soldering iron temperatures up to 660°F. It eliminates the problem of rework due to soldering iron damage.
- **Wide operating temperature range.** PCA insulated wires are rated for continuous operation from -55°C to 105°C regardless of the temperature range established by UL, CSA and MIL Spec ratings.
- **Improved chemical resistance.** PCA insulation has chemical and solvent resistance that is superior to the best grade PVC insulations.
- **Superior processability.** End costs are reduced with PCA insulated wires, which conform easily to desired shapes for chassis wiring and harness construction. PCA insulation can be cut and stripped cleanly by automatic processing equipment. The characteristic PVC creep due to insulation stretch is eliminated.
- **VW-1.** PCA insulated wire provides the same excellent flame-resistant properties as the best PVC insulations. It does not melt or shrink back at termination.
- **Ready availability.** PCA insulated wire is available in nine UL styles and over 100 types and configurations. They are UL and CSA rated, and MIL specified at your option.
- **Reduced material costs.** PCA tinned copper conductors do not require expensive silverplating as do many fluorocarbon constructions. PCA with tinned copper is comparable to fluorocarbon insulations with silver plating in every respect but one - price.

There, PCA offers the significant advantage of lower cost with equivalent quality.

FLEXRAD HV™ (105°C XLPE)

FLEXRAD HV is specially designed as a high voltage lead wire for consumer electronics, appliances, test equipment and instrumentation. It has Judd Wire's superior cross-linked polyethylene insulation and is temperature rated for 105° continuous, with excellent overload capacity for short duration.

- **Application-matching variety.** FLEXRAD HV is available in seven voltage ratings. 5kV to 40KV, so it is easily matched to your applications without expensive "overkill." There is no need, for example, to substitute a 15kV wire in a 5kV application. Savings up to 20% in cost, space requirement and wire weight are possible by specifying the right FLEXRAD HV for each job.
- **Superior production properties.** The excellent flexibility of FLEXRAD HV makes it easy to use in tight places. Its tough irradiated polyethylene insulation resists shrink-back and melting, even when in direct contact with a soldering iron.
- **Excellent performance characteristics.** FLEXRAD HV has high resistance to abrasion, deformation, cut-through and chemical attack.
- **Flame retardant rating VW-1.**
- **Three conductor styles.** Solid tinned copper, stranded bare copper with tinned overcoat (TOP), or stranded tinned copper with tinned overcoat (TOC).

FLEXRAD 125™ (125°C XLPE)

FLEXRAD 125 is an irradiation cross-linked polyethylene insulated wire, tri-rated by UL, CSA and Military Specifications for a wide variety of uses. It is offered in three styles, each of which has these desirable characteristics:

- **High heat and abrasion resistance.** FLEXRAD 125 has excellent abrasion resistance (no cut-through) and exhibits no shrink-back even when in direct contact with a soldering iron.
- **Excellent chemical resistance.** FLEXRAD 125 insulation has unusually high resistance to chemicals and solvents, especially potting systems, which makes it ideal for transformer applications.
- **Wide operating temperature range.** FLEXRAD 125 insulated wires are rated for continuous operation from -55°C to 125°C, as recognized by UL, CSA and Military Specifications.
- **Flame retardant raring VW-1.**
- **Superior processability and performance.** Highly flexible FLEXRAD \125 wires conform readily to desired shapes for lead wire and interconnection applications. They avoid the limitations of conventional 105° C PVC: limited temperature range, solder iron shrink-back, creeping insulation during automated cut and strip processing, and poor abrasion resistance. Similarly, FLEXRAD 125 avoids the production problems of fluorocarbons: cold flow, low adhesion, poor cut-through resistance, short lengths, limited flexibility and poor potting ability.
- **Reduced material costs.** Instead of the silver-plated conductors often required with fluorocarbon constructions, FLEXRAD 125 can use tinned copper at substantial savings

FACILITIES/SERVICES

CUSTOM ENAMELING
In our custom enameling facilities we enamel most metals from .072″ to .0004″ round or square and rectangular sizes smaller than 14 AWG or 3500 sq. mil. cross-sectional area. Insulations are available in special colors, builds and bondable overcoats. All insulations meet NEMA MW 1000, 105–220°C, single thru quadruple film builds. Up to 10 insulation colors are available to aid in conductor identification.

WIRE SHAPING
MWS produces a complete line of miniature square and rectangular wires in a variety of metals. Sizes smaller than 14 AWG sq. and rectangular shapes smaller than 3500 sq. mils. are produced bare as well as film insulated.

RIBBON ROLLING
MWS operates facilities for production of flat ribbon wire in a wide variety of metals. Thicknesses range from .0005″ with widths up to .125″ Ribbon wires are available bare, film insulated and plated.

DRAWING AND ANNEALING
Our drawing and annealing capabilities round out our custom manufacturing facilities. These capabilities allow us to fabricate most metals from .064″ through .0004″ diameter in the temper and quantity you require.

TESTING LABORATORY
Expanded test facility provides complete chemical, physical and electrical test data for applicable military, federal, commercial and customer standards. Metallurgical and I/R spectro analysis are also available. We can provide you with fast and accurate answers to your technical questions.

CUSTOM PACKAGING
MWS has designed custom molded, individual foam shipping containers for our 2½″, 3″, 5″ and 6″ plastic spools. These containers eliminate damage in shipping, and later prevent breakage in storage and production line handling.

WIRE TWISTING
MWS operates facilities for twisting 2 or more conductors 24 AWG and finer. Twisting tightness up to 33 twists per inch and to tolerances of ± 1%. Conductor materials include copper, silver, plated conductors and specialty alloys, in bare and insulated constructions.

WIRE SPOOLING
Spooling facilities handle every size wire from heavy square and rectangular to ultra-fine. This enables you to buy the quantity of wire you need on the spool size you want.

MULTIFILAR®
MAGNET WIRE

Parallel bonded for windings and leads.

When two or more magnet wires travel together, MULTIFILAR magnet wire is an excellent alternative.

This parallel bonded, color-coded magnet wire offers more consistent capacitance and impedance characteristics when compared to windings using two or more separate magnet wires.

And, it allows for increased layer winding speeds, as well as reduced labor and handling. Color-coding assists in conductor identification and helps eliminate termination errors.

MULTIFILAR magnet wire is custom produced to guarantee flat, parallel construction in an array of sizes, 16–52 AWG, with up to 20 conductors in some sizes.

Available constructions include round, flat or square conductors. Individual conductors meet NEMA MW 1000, JW 1177, temperature classes 105–220°C; single through quadruple film builds. Color-coded conductors are available in most insulations with up to 10 different colors in some sizes.

Call or write for your free copy of our new Technical Data and Capabilities Brochure. It contains valuable information on all wire produced and inventoried by MWS Wire Industries. Samples of MULTIFILAR are available upon request.

MICROSQUARE™
MAGNET WIRE

For specialty coil and motor windings.

While product miniaturization allows less space for components, MWS MICROSQUARE film coated magnet wire lets you design compact coils and small motors that deliver more power in less space.

MICROSQUARE means miniature square and rectangular copper and aluminum magnet wire. Custom produced in sizes *smaller* than 14 AWG or 3500 sq. mil. cross-sectional area, MICROSQUARE is available in a wide range of solderable and high-temperature insulations in a variety of colors, with or without bondable overcoats.

MICROSQUARE magnet wire was developed to provide improved winding uniformity and maximum use of space. When you're looking for options to meet the most demanding coil, small motor, or other special application requirements, without size limitations or quantity minimums, take a good look at MICROSQUARE magnet wire.

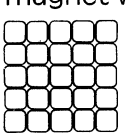

Illustration of cross-section of coil winding using MWS MICROSQUARE magnet wire. Note improved winding uniformity and maximum use of space.

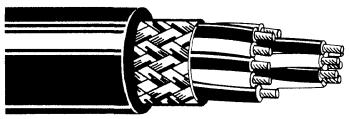
Miniature Signal & Control Cables Single Conductors (NX Series)



(NX1922SJ shown)

National Wire & Cable Corporation manufactures a complete line of MINIATURE low voltage signal and control cable. Available as cabled pairs or cabled singles, with optional overall shield. Conductors are stranded tinned copper with .010" wall of vinyl primary insulation for use up to 105°C per MIL-W-16878 Type B. Insulated for 600 volts working voltage. (Also meets U.L. AWM Type 1061; 300 volt, 80°C.) All are coded using 10 standard colors plus stripes on white per MIL-STD-681.

All conductors are planetary cabled and contra-helically laid for optimum flexibility, with a Mylar tape barrier under shields. Shielded cables have a tinned copper braid overall, of 85-90% coverage per MIL-C-7078; and braid angles below 40° for easy pushback.

The outer jacket is black abrasion-resistant 105°C. vinyl meeting MIL-I-631 Type F. All materials are self-extinguishing and fungus resistant. All items are U.L. LISTED STYLE 2343 COMPUTER CABLE; rated 80°C. (Higher temp. ratings apply for any non-U.L. service.)

U.L. and C.S.A. certification furnished only when requested.

Standard Putups: 500 and 1000 ft. No-deposit reels. For shorter quantities or specific lengths, consult factory.

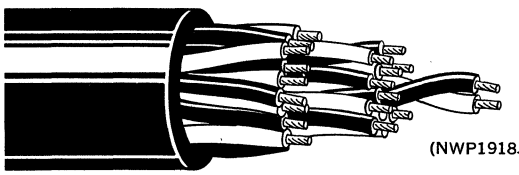
Heavy Duty Signal & Control Cables Twisted Pairs (NWP Series)



(NWP1918J shown)

IN STOCK MIL-SPEC

U.L. LISTED

Identical to National's NW-Series Cables except offered as twisted pairs.

National Wire & Cable Corporation manufactures a complete line of multiple pair control cables. Conductors are of tinned copper strand with 1/64" vinyl primary insulation for use up to 105°C per MIL-W-16878D Type C. Insulated for **1000** volts working voltage. Conductors are color coded using 10 standard basic colors, plus spiral tracers on white per table below.

All pairs are planetary cabled and contra-helically laid with a Mylar tape serve over the cable bundle. The overall jacket is a 105°C black vinyl plastic per MIL-I-631; or may be Neoprene to MIL-R-6855 Class 2 Grade 60 specification. (Neoprene at added cost and only available for non-U.L. applications).

SHIELDED CABLES

National Multiple Conductor SHIELDED CABLES are to the same specifications as above with addition of tinned copper braided shield over cable complex with 85-90% coverage to MIL-C-7078A.

TECHNICAL DATA (all cables)

Insulation Breakdown Voltage: Greater than 8,000 volts AC RMS, 60 cps.

Capacitance: Nominal capacitance wire to wire for a pair ranges from 27. to 40. mmfd/ft. Capacitance from both wires tied together measured to all else in common ranges from 35. to 60. mmfd/ft. dependent on gauge and position. Overall shield has negligible effect on W-W capacitance.

Insulation Leakage Res.: 200. megohms / 1000 ft. min. at 500 VDC from any conductor to all else in cable.

Sheath Leakage Res.: 10. megohms / 1000 ft. min. at 500 VDC from overall shield through sheath to outside world.

Usable Temp. Range: Suitable for continuous use from +105°C to −55°C.

Cold Bending Capability: All cables are suitable for flexing to a circle diam. of approx. 6 cable diameters from +105°C to −20°C; Recommended flex diameter should be greater than 20 cable diam. for flexing at −40°C. For continuous flexing applications consult factory.

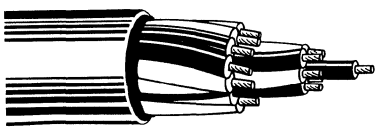
Miniature Signal & Control Cables Single Conductors (NQ Series)

EXTRA FLEXIBLE — GRAY PVC JACKET



(NQ1928J shown)

MIL-SPEC & U.L. LISTED **STYLE 2464**

GRAY PVC JACKET

National Wire & Cable Corporation manufactures a complete line of highly flexible micro-miniature low-voltage instrument control cable. These are available as cabled pairs or singles, with optional overall shield of either foil with drain or a braided shield. Stocked with braided shields.

Conductors are stranded tinned copper with .010" wall of tough extruded polyvinyl chloride primary insulation, rated for 300 volt use at +80°C under U. L. listed style 1061.* All are color coded using ten standard colors plus white with stripes per MIL-STD-681. Coded pairs use the same sequence as type NXP and NWP.

Conductors are planetary cabled and helically laid for optimum flexibility, with a barrier under braids. Shielded cables have a tinned copper braid of 90% coverage per MIL-C-7078, with braid angles below 40° for easy pushback; or have a 100% coverage foil shield in intimate contact with a drain wire for easy termination. See Section 3 of our master catalog for relative shield effectiveness.

Outer jacket is highly flexible abrasion-resistant gray polyvinyl chloride thermoplastic, meeting the requirements of U.L. listed style 2464.**

Military certification furnished only when requested.
All materials are flame retardant and fungus resistant.

Standard Putups: 500 and 1000 ft. No-deposit reels. For shorter quantities or specific lengths, consult factory.

* Wire also meets MIL-W-16878 type B, rated 600 volts, +105°C.

TECHNICAL DATA (all cables)

Insulation breakdown voltage:	Greater than 3000 volts AC RMS, 60cps.
Capacitance:	Nominal capacitance from a wire to all else in a cable ranges from 25 to 45 pf/ft at 1kc, depending on gauge and position.
Insulation Leakage:	200 megohms/1000 feet minimum @ 500VDC from conductor to all else in cable.
Sheath Leakage:	10 megohms/1000 feet minimum @ 500VDC from shield or conductor group through sheath to ground.
Temperature Range:	U.L. rating: +80°C per U.L. style 2464. Military: Continuous use from −40°C to +105°C.
Bending Characteristics:	All cables are suitable for flexing to a circle diameter of 6 cable diameters from +105°C to −20°C. Recommended flex diameter should be greater than 20 cable diameters for flexing at −40°. For continuous flexing applications consult the factory.
Foil Shielded Cables:	The nominal overall diameter of foil shielded cables will be .006" greater than the non-shielded cables of the same conductor count and wire size.
Characteristic Impedance: (NQP Paired Cables)	Ranges from 150 ohms to 45 ohms, dependent on wire size (AWG), geometry and drive method. Consult our technical staff for data on specific cable types.

MULTI-CONDUCTOR STOCK CABLED SINGLES

Conductor sizes 28, 26, 24, 22 are 7 strand. All others 19 strand.

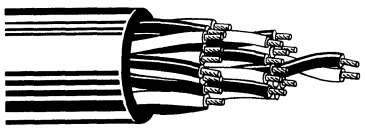
Miniature Signal & Control Cables Twisted Pairs (NQP Series)

EXTRA FLEXIBLE — GRAY PVC JACKET



(NQP1928J shown)

MIL-SPEC & U.L. LISTED **STYLE 2464**

GRAY PVC JACKET

National Wire & Cable Corporation manufactures a complete line of highly flexible micro-miniature low-voltage instrument control cable. These are available as cabled pairs or singles, with optional overall shield of either foil with drain or a braided shield. Stocked with braided shields.

Conductors are stranded tinned copper with .010" wall of tough extruded polyvinyl chloride primary insulation, rated for 300 volt use at +80°C under U. L. listed style 1061.* All are color coded using ten standard colors plus white with stripes per MIL-STD-681. Coded pairs use the same sequence as type NXP and NWP.

Conductors are planetary cabled and helically laid for optimum flexibility, with a barrier under braids. Shielded cables have a tinned copper braid of 90% coverage per MIL-C-7078, with braid angles below 40° for easy pushback; or have a 100% coverage foil shield in intimate contact with a drain wire for easy termination. See Section 3 of our master catalog for relative shield effectiveness.

Outer jacket is highly flexible abrasion-resistant gray polyvinyl chloride thermoplastic, meeting the requirements of U.L. listed style 2464.**

Military certification furnished only when requested.

All materials are flame retardant and fungus resistant.

Standard Putups: 500 and 1000 ft. No-deposit reels. For shorter quantities or specific lengths, consult factory.

* Wire also meets MIL-W-16878 type B, rated 600 volts, +105°C.

** Jacket material is military rated for +105°C; meets MIL-I-631, Class F.

TECHNICAL DATA (all cables)

Insulation breakdown voltage:	Greater than 3000 volts AC RMS, 60cps.
Capacitance:	Nominal capacitance from a wire to all else in a cable ranges from 25 to 45 pf/ft at 1kc, depending on gauge and position.
Insulation Leakage:	200 megohms/1000 feet minimum @ 500VDC from conductor to all else in cable.
Sheath Leakage:	10 megohms/1000 feet minimum @ 500VDC from shield or conductor group through sheath to ground.
Temperature Range:	U.L. rating: +80°C per U.L. style 2464. Military: Continuous use from −40°C to +105°C.
Bending Characteristics:	All cables are suitable for flexing to a circle diameter of 6 cable diameters from +105°C to −20°C. Recommended flex diameter should be greater than 20 cable diameters for flexing at −40°. For continuous flexing applications consult the factory.
Foil Shielded Cables:	The nominal overall diameter of foil shielded cables will be .006" greater than the non-shielded cables of the same conductor count and wire size.
Characteristic Impedance: (NQP Paired Cables)	Ranges from 150 ohms to 45 ohms, dependent on wire size (AWG), geometry and drive method. Consult our technical staff for data on specific cable types.

LOW VOLTAGE COMPUTER CABLE

THE D-200 SERIES CABLES ARE MULTIPLE-PAIR FLEXIBLE CABLES DESIGNED FOR TRANSMISSION OF DIGITAL PULSE SIGNALS BETWEEN A COMPUTER AND ITS PERIPHERAL EQUIPMENT.

DESIGN FEATURES OF THE D-200 SERIES DIGITAL DATA CABLE

Unlike conventional flexible cable construction, the primary features offered by the D-200 series data cable are the high and accurately controlled characteristic impedance of every pair, regardless of its position in the cable and special geometry chosen to reduce crosstalk.

ADVANTAGES

1. Less crosstalk and noise from mismatched loads, due to proper matching.
2. Uniform light loading on drivers allows direct I.C. drive, accurate prediction of current demands from power supply, and driver power dissipation.
3. Proper load match reduces re-flection and inversion noise where driver end is not matched to line. (Typical of TTL.)
4. Special geometry and pair construction provides exceptionally close capacitance balance between pair wires, reducing differential crosstalk.

USAGE

We recommend use of balanced drive and differential-input line receivers for lowest crosstalk and best pulse reproduction, utilizing the 110 ohm balanced impedance of the pairs. With such a system, TTL speeds have been used on D-200 cable at 1 mc data rates over 1000 ft.

Where the system is single-ended drive and receive, all pairs exhibit the 78 ohm impedance. Since these line receivers cannot discriminate between noise and the desired signal, crosstalk limits the cable distance over which transmission is reliable. Typical runs for DTL having 50 ns risetimes are 200 ft. Where risetimes can be slowed to longer than 100 ns, run lengths are practical to 500 ft. Without differential line reception, runs over 500 ft are not recommended for D-200 cable due to external noise aspects.

The D-210 series cable are recommended for high noise or long-run application. (Utilizing individual shields.)

Although use of balanced drive and differential line reception will avoid most noise problems, there are some installations where the expected external noise is unknown but assumed to be very great. Here, the use of data cables having individually-shielded pairs may be considered as conservative engineering practice. The assurance of a lower received noise may justify the increased size, cost and rise-time.

For these high noise-long run applications, Dynatronic Cable Engineering Corp has developed the D-210 series data cables. Electrical performance is essentially the same as the D-200 series cables, which use only an overall shield. △ An overall tinned-copper shield braid may be specified on either series by the suffix -RF on the part number. Standard D-200 shield is aluminum-mylar foil.

For runs of 1000-5000 ft. or where extra-fast output pulse risetime is required, we offer the D-220 series cable: a larger version of the D-200 series having improved transmission properties with sufficient mechanical strength for long pulls in conduit. Consult factory for technical data.

PULSE TRANSMISSION LOSS in D-series data cables causes a moderate amplitude loss, with definite rounding of the leading and trailing edges from 50% to 90% amplitude. The photos below (for a 1.25 megabit clock rate) show typical waveforms. The D-220 and D-222 series cables offer even lower losses than the D-200 or D-210 cables for long-run or fast-clocked applications.

Contact our factory engineering staff for detailed pulse-shape versus distance information, or for special applications.

International Cords & Cordsets

Designing your Product for Export

There are three important technical hurdles facing the designer of equipment that will be exported:

- the product must be easily connected to foreign mains power outlets or wall sockets.
- the product must work at foreign mains voltages and frequencies which range from 100-250VAC at 50 or 60Hz. European voltages are typically 220 at 50 Hz. (See our power inlet modules with integral voltage selectors in Section 2100.)
- the product must conform to foreign product safety standards as enforced by appropriate national standards and test agencies.

Specify Harmonized Cordage when Exporting

Note that cords or cordsets on products being shipped to Europe—and almost everywhere outside of North America—must utilize Harmonized cordage manufactured to CENELEC standards HD-21 (PVC jacketed) or HD-22 (rubber jacketed). Harmonized cordage differs from North American AWG cordage in several ways. The main differences are:

- Primary insulation color coding:

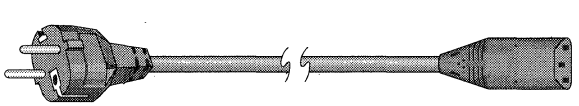
	Harmonized	North Amer. AWG
Line	Brown	Black
Neutral	Blue	White
Ground	Yellow-Green	Green

- Harmonized wire sizes are expressed in metric units (North American wire sizes are expressed in AWG). Some common power cordage wire sizes are noted below:

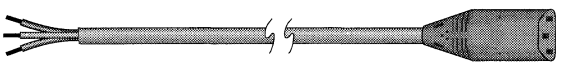
AWG	Closest Metric Equiv.	Max. Current
18 AWG	0.75mm²	6A
16 AWG	1.00mm²	10A
14 AWG	1.50mm²	16A

Specifying International Power Connections (options at right)

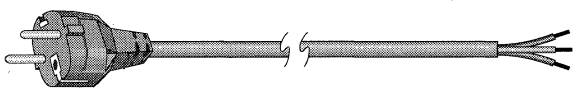
1. **Detachable cordsets** based on IEC 320, standard sheets C13 & 14. Benefit: Flexibility. The IEC 320 power inlet (installed on product) and outlet (on cordset) allows the manufacturer to attach a cordset with the correct international or North American wall plug just before shipment. Current ratings are limited to 10 amps by European agencies. (IEC 320 standard sheets C19 & C20 permit detachable power connections rated at 16 amps—PCC offers several standard high-power cordsets—see the pages which follow for more information.)



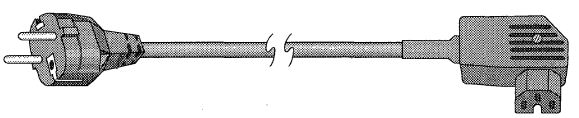
2. **IEC 320 cord with Harmonized or SJT cordage and no plug:** Ready for attachment of correct overseas or NEMA plug—when small export volume does not justify stocking different cordsets



3. **Power Supply Cords:** Usually specified when equipment requires more than 10A. For applications rated at 10-16 amps, 1.5mm² (cp. 14AWG) conductors are specified.



4. **Made-to-Order Cord & Cordset Assemblies:** Specify a made-to-order assembly when standard model is not available or when special end preparations are required.



5. **Cordage:** When neither a molded power supply cord or cordset is suitable, international or North American cordage with appropriately sized conductors may be the best alternative.

European High Power Connections

The single-phase cords and cordsets below use standard international cords with detachable IEC 320 connectors and/or plugs & inlets based on IEC 309. The 3-phase cords and cordsets below utilize only IEC 309 connectors. IEC 309 outlines s a power connection system for use at 16-125A. Detachable power connection systems are particularly useful where a piece of equipment must be moved from workstation to workstation. IEC 309 connectors are designed to eliminate mismating of connectors of different amperages and voltage ratings through unique key/keyway, pin patterns and connector sizes.

eem MINIGLOSSARY CONNECTORS

Connector terminology is often quite confusing. This confusion starts with the very names of connectors. The name of a connector may derive from its shape, application, type of conductor or even method of termination.

Shape—Circular, cylindrical, and rectangular.

Electrical application—High voltage, RF, microwave, input/output, etc.

Mechanical application—Printed circuit, rack & panel, cable, etc.

Conductor type—Coaxial, flat cable, ribbon cable, flex circuit, etc.

Termination method—Wirewrap, soldercup, solderless, etc.

Hardware such as clamps, hoods, and adapters are frequently used to convert cable connectors to rack and panel types. This adds to the name confusion. A very common telephone connector, for example (the "C" type) got its name from the model number of the original maker.

Contact: The part(s) of the connector that actually provides circuit continuity between its two sections—the parts which are normally mated. The back end of the connector should properly be called the *termination.* This is the point where the wires or PC board is attached to the connector.

Contact alignments: Often called *contact float.* Describes the amount of allowable contact movement within the connector body. Permits self-alignment.

Male vs. female: In the U.S. this describes the contact construction. In Europe this term is more often used to describe the outer shell mating action which may be the reverse of the contacts.

Closed entry: A female contact which prevents entry of a male contact larger than a specific size.

Open entry: A female contact designed for a specific size of male contact but which will allow entry of larger male contacts by spring action.

Hermaphrodite: Contacts or connector bodies which are the same configuration. Male/female designations do not apply. Bodies usually have some mechanical means for maintaining polarity.

Hermetic seal: Glass-to-metal seals at terminations. Often used improperly to describe vacuum-tight seals.

Waterproof seal: May or may not be truly *waterproof.* May prevent easy entrance of casual water by means of a rubber or other boot.

Printed circuit connector: Connectors which are used in conjunction with printed circuit boards. There are two distinctly different styles.

Edgeboard. May be called *edge* or *card.* The printed circuit (PC) board edge enters the connector.

Two-piece: One part of the connecting pair is physically attached to the PC board itself. The other part is attached to something else such as a cable or a motherboard.

Readout: Describes the arrangement at the terminating edge of a PC board. May be single or double. A double readout PC board has termination strips on each side not usually interconnected.

Ribbon connectors: A type of connector which allows flat "ribbon" cable to be attached to a round or rectangular connector but also used interchangeably for flat connectors to flat cable.

Ribbon contact connector: Describes the contacts in a rectangular connector which have a self-wiping mating action. Not the same as ribbon connector.

Solderless terminal: Any style of termination which does not require solder for a permanent connection. See *crimp* and *insulation displacement.*

Crimp termination: A stripped wire is inserted into a barrel or trough which is then crimped to the conductor with a suitable tool.

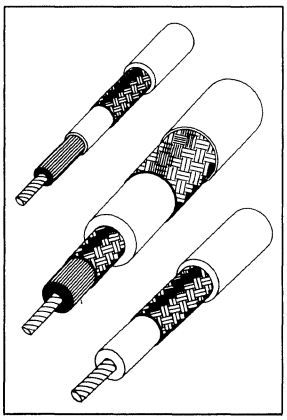
Insulation displacement: Unstripped insulated wire is fitted into a channel containing metal teeth which are forced through the insulation to make contact with the conductor.

Service rating: The maximum rated voltage and/or current which may be applied continuously. May be called *working voltage.* Can be confused with the term used to describe how many times a connector may be mated and separated.

Withstanding voltage: Also called *test voltage.* The voltage a connector must withstand for one minute without breakdown. Applied between connectors and between connectors and shell and any grounding devices of the connector.

Rowe High Temperature, High Voltage, Cable and Wire

High Voltage Cable



Rowe Industries has provided industry and the military with high reliability, corona-free, high voltage cable designed for use in varied and exacting applications such as accelerators, radar, X-ray, and ECM equipment.

The semi-conducting corona-suppressing layers with thermosetting materials provide noise free, corona-free cable and wire. Various high pulse coax and triax types are listed in the chart.

Primary insulation is extruded silicone and outer jacket is silicone, neoprene or PVC. Consult factory for exact cable construction.

Cable jacket color is black. Additional colors are available for some cables. Consult factory.

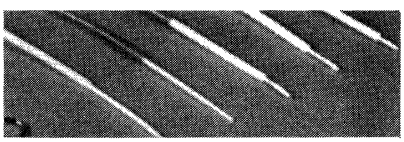
High Voltage Silicone Coated Teflon Insulated Wire



Rowe's high voltage silicone coated teflon wire is designed for use in radar systems, ECM's, CRT displays, laser systems, and airborne system applications where maximum operating capability with minimal size is a must.

Silicone coated teflon wire offers excellent dielectric strength while maintaining the small diameter so often required in a systems' package design. The wire can be easily bonded to with most silicone based RTV's, eliminating the need for chemical etching of teflon wires.

All operating voltages listed are continuous DC ratings from +55°C to +150°C, and sea level to 70,000 ft.

* "Nomex is a trademark for DuPont Aramid (Polyomide) Fibers "Teflon" is a trademark of DuPont

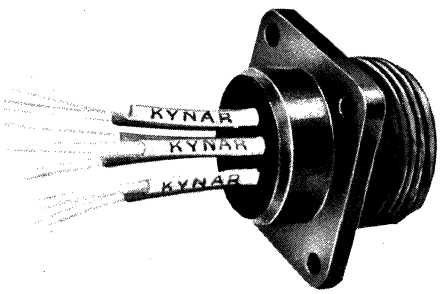
TUBING, SHRINKABLE

KYNAR* TUBING



WEICO'S Kynar is an irradiated, thin-wall, heat-shrinkable tubing offering a high degree of mechanical strength and high-temperature resistance. Kynar is fabricated from polyvinylidene fluoride, hence, their outstanding abrasion resistance and cut-through properties in combination with high dielectric strength. Kynar is inherently flame-retardant and semi-rigid. It is highly resistant to most industrial fuels, chemicals and solvents.

Kynar tubings are recommended for shrink-fit protection and strain relief of wires, solder joints, terminals and connections. Suggested applications include automotive wiring, jackets, fuse coverings and military wire markers. Because the tubing is transparent, it affords see-thru inspection and identification when used as a jacketing for components such as resistors and capacitors. Kynar tubings are readily marked by hot-stamp and print-wheel equipment.

Kynar tubings are rated for continuous operation from —55°C (—67°F) to +175°C (+347°F). The tubings will withstand higher operating temperatures for short time intervals.

Minimum shrink temperature for Kynar tubings is +175°C (+347°F).

Kynar tubings meet the requirements of MIL-I-23053/8, AMS 3632, and are U.L. recognized for 600 volts @ 150°C; U.L. VW-1 rated.

WEICO TUBING, SHRINKABLE

NEOPRENE TUBING

NEOPRENE very flexible, self-extinguishing, modified polychloroprene tubings combining a high degree of mechanical toughness and oil-resistance with 121°C continuous operating temperature.

WEICO'S Neoprene heat-shrinkable tubings are recommended for applications requiring a tough, highly flexible covering. Neoprene tubings are thick-walled, and provide superior cut-through and abrasion resistance. The tubings are unaffected by common fluids and solvents. Resistance to oils is excellent.

Neoprene tubings maintain flexibility at low temperatures. The tubings are particularly useful for the fabrication and repair of flexible harnesses and wire bundles and for covering of hydraulic couplings. The superior mechanical properties of Neoprene tubings make them ideal choices for the jacketing of cable harnesses and custom-made cables that must operate in severe environmental conditions.

Neoprene tubings are rated for continuous operation from —70°C (—94°F) to +121°C (+250°F). The tubings will withstand higher operating temperatures for short time intervals.

Minimum shrinkage temperature for neoprene tubings is +135°C (+275°F)

Neoprene tubings can be readily marked by hot-stamp and print-wheel methods.

Neoprene tubings are self-extinguishing and meet the requirements of MIL-I-23053/1 Class 1 & 2; MIL-R-46846, Type 1, Class 1 and AMS 3623.

IRRADIATED POLYOLEFIN MULTIPLE WALL, INNER WALL MELTS

WEICO'S SMW Tubings are rated for continuous operation at temperatures from —55° to + 110°C and will withstand higher operating temperatures for brief time intervals.

WEICO'S SMW Tubings meet the requirements of AMS 3634 and MIL-I-23053/4, Class 1.

WEICO'S SMW is a semi-rigid, 110°C heat-shrinkable polyolefin tubing that is co-extruded and selectively cross-linked to provide an integral, meltable inner wall.

On the application of heat in excess of 135°C WEICO'S SMW Tubing automatically shrinks and closely conforms to the contours of the underlying substrate. The inner meltable wall of the tubing is simultaneously softened and forced by the shrink action into intimate contact with all underlying surfaces, interstices and small voids. Upon cooling, the installed SMW Tubing represents a tough protective and insulating barrier, highly resistant to penetration by moisture and the attack of chemicals and solvents.
